

DATA POWERS YOUR FACILITY CONNECT PROTECT MANAGE REMOTELY

Honeywell Remote Management (HRM)

Honeywell

As your facility becomes more connected – to the Internet of Things (IoT), to the cloud, to your operations – it becomes an increasingly sophisticated and vital part of your business.

This means it also becomes increasingly essential to keep your facility and your Operational Technology (OT) network secure by continuously monitoring it to promote optimal uptime and rapid response.

REMOTE MANAGEMENT FOR YOUR OT NETWORK

Fortunately, the same Honeywell applications that help you connect and control your building from virtually anywhere in the world can now help you protect and secure it remotely.

Introducing the Honeywell Remote Management (HRM) platform: One of Honeywell's Cybersecurity offerings to help optimize the performance and security of your facility OT systems with regular remote monitoring of health, connectivity, compliance and uptime.

WHEN YOU NEED TO KNOW, YOU GET ALERTED

The HRM platform continuously monitors and analyzes your critical OT servers, workstations, virtual machines, and applications to help alert you regarding potential issues - proactively. This level of visibility can help you effectively plan and monitor critical site activities.

The platform also provides guidance to help you prioritize maintenance while promoting enhanced value and minimized disruption, while using a powerful scripting engine to support customization and automation for ongoing improvement.

Keep your facility up and running, with Honeywell.
