

A WELCOME SIGHT IN BUILDING CONTROL.

Looking for a clearer way to watch & manage your critical environment facility? Introducing Vision by Phoenix Controls.

Vision CE is a real-time critical systems analysis tool that allows you to customize reporting, scheduling, and alarm management. This comprehensive tool supplements your facility's existing Building Automation System and provides full, web-based operation as a Critical Systems Analysis Tool.

Innovation Comes Into View

With Vision by Phoenix Controls, you will enjoy features such as:

- A full suite of powerful and customizable real-time reporting tools
- Critical Analytics at every level to help evaluate and maintain proper building operation for facilities, safety, and energy management
- Easy to read and navigate UI, providing detailed data on air change rates in real or historic time frames.
- The ability to be customized to specific campus, building, floor, and room specifications.
- A drag and drop architecture builder, plus many pre-built mechanical templates, makes for easy set-up and updates as your facility needs grow.
- Custom reporting to help provide certification management, trend analysis, and energy efficiency tracking information and more.
- Review, report, and make equipment decisions with air flow building diversity visibility.
- Information feeding into Vision is not limited to Phoenix Controls equipment.

For your critical room control system needs, Phoenix Controls is simply the best in the business. Our customers know the quality and reliability of our venturi valve and control system is second to none. And now, our innovative Vision analysis tool is just one more reason to look to Phoenix Controls.

Connect with your Phoenix Controls representative for a demonstration, and see how you can improve visibility into your critical environment facility with Vision by Phoenix Controls.
