# Pro-Watch® AP Identity Management Solution

Airport Security Solutions

Honeywell Pro-Watch AP IDMS

Pro-Watch® AP has been the trusted Identity Management Solution (IDMS) for controlling Airport personnel for over 25 years. Although Honeywell has been protecting airports for a long time, the software to track identities and protect airports has significantly evolved over the years to what it is today. The Honeywell Pro-Watch AP IDMS manages each applicant's status real time, from authentication and authorization, all the way to provisioning badges for access in the physical access control/security system. And Pro-Watch AP is an open platform so it doesn't only work with Honeywell products, it can work with virtually any access control or other computer-based system for a fully integrated Identity Management and Security system.

Airport Personnel Control

Airports have one of the most difficult challenges in managing the credentials, verifying people's true Identity and checking their backgrounds. Some airports have hundreds of different contract workers under different companies and they all need to be verified and managed according to the different transportation authorities such as the Transportation Security Administration (TSA) or Canadian Air Transport Security Authority (CATSA). With Pro-Watch® AP, we give you serious protection that integrates into a total security solution and maximizes your investment.

Productivity

Airports often operate their different systems in silos. Honeywell's Pro-Watch AP solves that problem with a supervisory management software that connects them all together and automates the manual processes. This increases the productivity of personnel so that they may keep badging lines down to a minimum. The automated data transfers help to greatly reduce human error and eliminate the need for duplicate entries.

Compliance

Airport security compliance is ever evolving. Honeywell stays on top of the different regulations and updates our software accordingly to help keep our customers in compliance. Issuing and verifying badges and credentials is a key security component at any airport, and the need to comply with Homeland Security Directives and the TSA adds to the challenge. Honeywell offers a best-in-class aviation IDMS security management solution that helps you enforce compliance with Certification Management and Compliance Reports that make audits a breeze. Keeping up with the ever-changing security legislation and resulting mandates is a full time job in itself—one that Honeywell is committed to helping you with. Staying on top of mandates that affect your airport is part of our total security solution commitment to give you peace of mind.

Security

If every airport were built to the exact same specification, then the same security solution could be used in all of them. But each airport is unique in its design and the way they process applications for credentials. The Pro-Watch Airport Pak is a complete security management system designed, specifically for the unique needs of airports. We have collected valuable data from our airport customers about their requirements to provide a complete security system that acts both as a deterrent and a means for a quick response. PWAP tracks applications and approvals throughout the Badge provisioning process to improve the time it takes to verify identities and create badges.

Cost Savings

Pro-Watch Airport Pak is a proven system used by many of our nation's largest airports and around the world. Many third party integrations have already been built, reducing complications and increasing the speed to which the system can be installed and working. Because the Honeywell Identity Management solution is 80% off the shelf and 20% custom, you'll enjoy lower installation costs and more importantly, lower on-going operating costs for support.
