Le Sucre™

A security system to remotely monitor your home

Le Sucre has been designed to **unobtrusively** integrate into today's stylish interiors.

Secured **U**ser Friendly **C**ost Effective **R**eliable **E**xpandable
Internet access solution

No connection is needed with your Internet box.

Le Sucre operates with its own **GSM/GPRS** module and SIM card for Internet access.

As a result, the system can operate even in case of Internet box connection trouble or cable disconnection and it can be placed anywhere in the home.

Thanks to the **proximity reader**, arming and disarming the system is easy. A web App called "**Total Connect 2.0E**" has been developed to bring you more possibilities like seeing the temperature in your home, and controlling your system from your **smartphone, tablet or computer**.

Installation of Le Sucre takes only a few minutes, and comes with a **free of charge SIM card (valid for two years)** providing a cost effective solution. And you can easily take it with you if you move house.

You can certainly find many systems on the market, but what about their reliability? Le Sucre uses a proven and **recognized technology** from Domonial, one of the most popular wireless security systems in Europe already chosen by more than two million customers.

Le Sucre range includes a large number of wireless peripherals for security like **motion sensors** with **built-in camera**, **glassbreak sensors** or **door contacts**, and also for safety like **smoke** or **carbon monoxide** sensors and **panic alert buttons** for elderly people in their home.

Installed by security professionals and with **Honeywell Cloud Services**, **Le Sucre** offers the home owner a self-monitoring security system based on the same technology and quality as monitoring station connected installations.
