

YOUR PARTNER OF CHOICE

**Global Solutions For
A Global Economy**

PROTECTING YOUR Valuable Assets

Your job is to account for every transaction, control who has access to data, and protect your staff, customers and facilities at the same time. Our trusted experience, combined with the quality and reliability of our integrated security systems, allows our customers to meet their existing and emerging security challenges. From enterprise access control to video surveillance to intruder detection, we design our products using feedback from customers so enhancements and functionality are driven by your needs. Honeywell creates value for your organisation in four ways:

Productivity

Honeywell's enterprise-wide security management systems provide central command and control of access to your facilities. This saves you time and money by using technology to automate processes such as access control, visitor management and intrusion. In addition, your intrusion system can be professionally monitored 24/7 by an alarm receiving centre allowing your resource to be deployed elsewhere. By giving you maximum control over users, we ensure that your people, assets and facilities can continue to operate at full capacity.

Cost Savings

Along with savings generated through reduced theft and the protection of staff and property, our security offerings work seamlessly with many third-party systems. You can migrate from analogue to digital systems or integrate disparate systems but still keep costs down by not having to invest in all new hardware. And because a streamlined process makes it easy to centralise your operations as you assimilate new companies during a merger or acquisition, you'll make the most of your investments.

Compliance

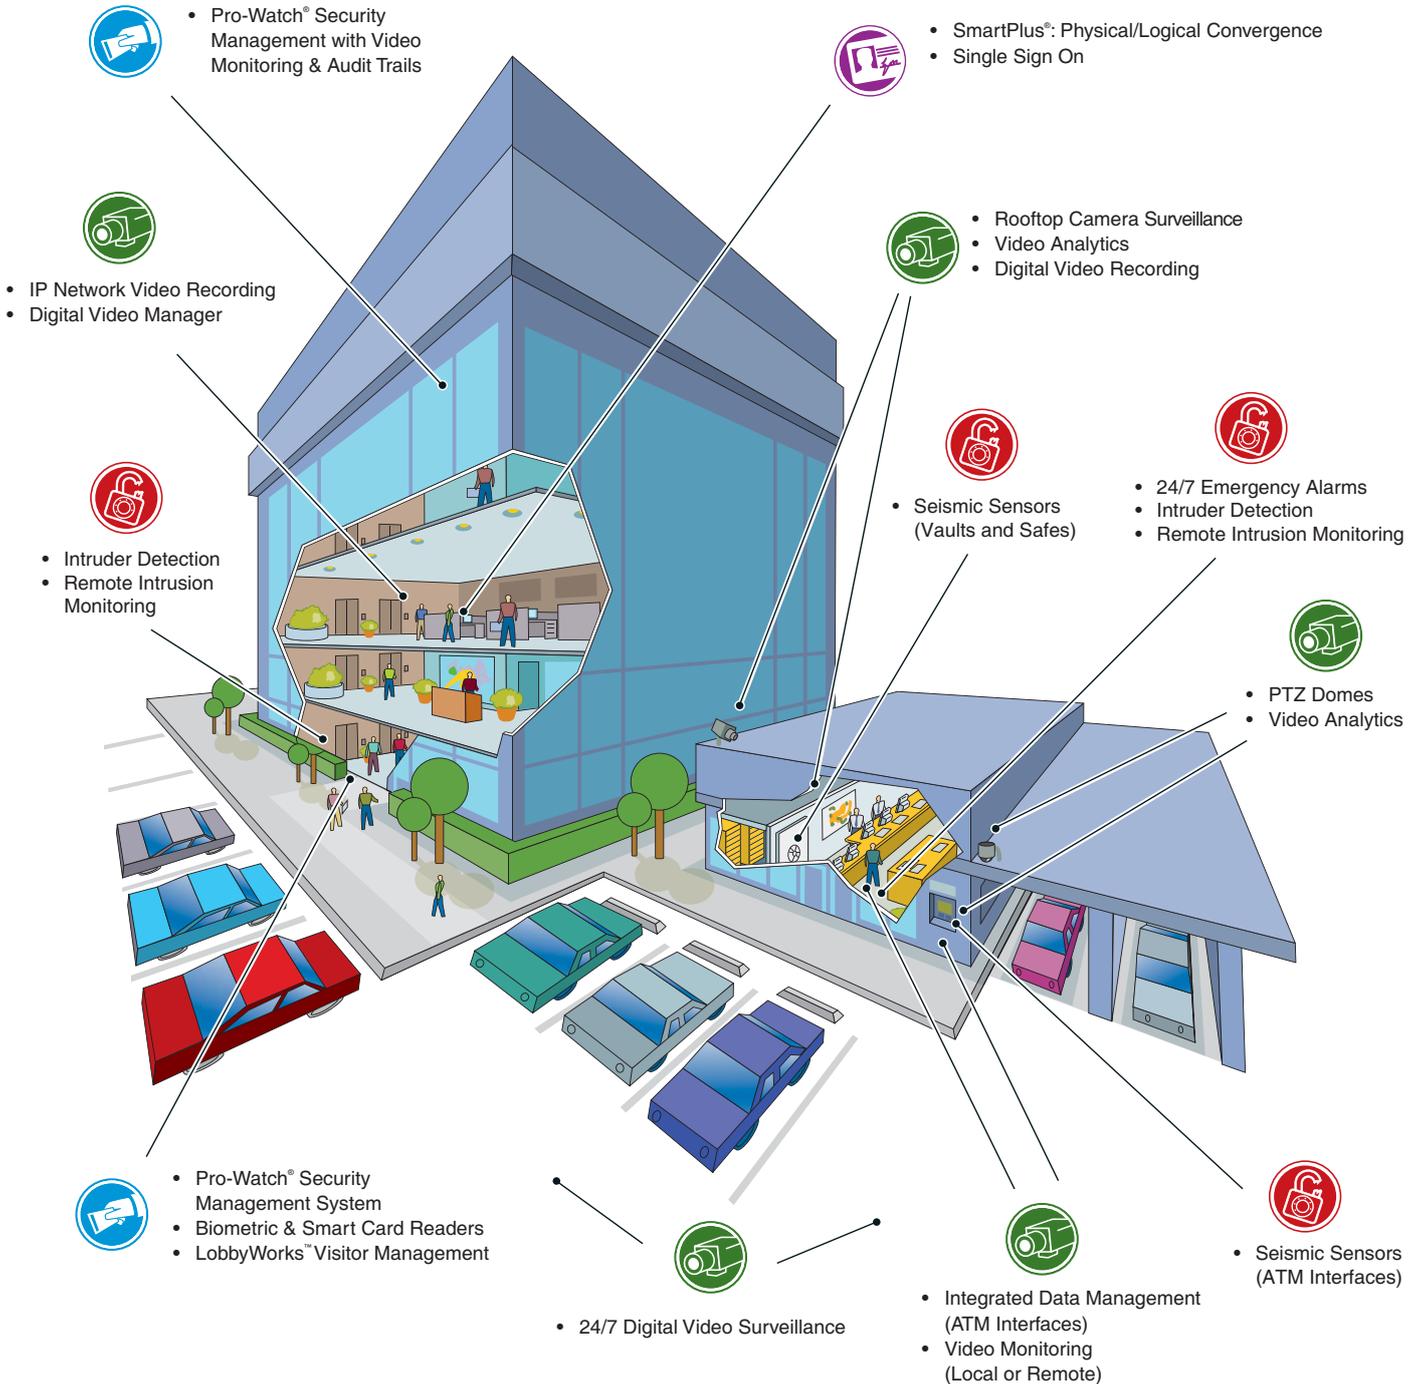

Organisations can spend hundreds of hours responding to auditor requests to prove compliance to Sarbanes-Oxley, Gramm Leach Bliley and other financial regulations. Honeywell has an identity management system that manages and authenticates user credentials. It integrates badging and card production with security management systems such as our Pro-Watch platform and it offers complete compliance with FIPS 201 and HSPD-12 requirements. Together, these security solutions help you coordinate security efforts, create reports efficiently and mine data.

Security

Security is more than protection against theft and violence — it is required to do business. Your customers trust you to protect their money and investments. Your employees trust you to provide a safe working environment. And you can trust Honeywell to deliver a complete security system that easily migrates and integrates disparate systems — whether they are access control, video surveillance, intrusion protection, fire protection, or intelligent video analytics.

Finance/Banking Security Solutions

CUSTOMISABLE SOLUTIONS

From video surveillance to sophisticated security management systems, Honeywell has the security solutions that financial facilities need. Whether you have a bank vault or offices of computers with privileged information, you can count on Honeywell.

Access Control & Visitor Management

Logical Integration

Intrusion Detection

Video Surveillance & Analytics

Case Study

Client: Nomura

Situation: Headquartered in Tokyo, Nomura is a top tier international bank providing investment and merchant banking services to corporate and institutional customers. It is imperative that Nomura has a secure and easy to use access control system with a global footprint. One that is flexible enough to manage the access control demands at any Nomura office location from a single point whilst maintaining local operational autonomy.

In London, Nomura's building in Angel Lane contains a large number of personnel, all requiring varying levels of access control authority, some to strictly controlled, authorised areas. The access control system must operate 24/7 to accommodate varying shift patterns and provide customised reports with multiple criteria. The system would need to store up to 4000 card holders, including staff, authorised contractors and visitors.

In addition, the solution needed to enable Nomura to separate and isolate people who make investment decisions from people who are privy to undisclosed material information which may influence those decisions. These 'chinese walls' are a Financial Services Authority (FSA) regulation to safeguard insider information and ensure no improper trading occurs.

Results: A Honeywell Pro-Watch® security management system (Enterprise Edition) was specified by Nomura.

The Pro-Watch solution would run on the bank's own network via a single database and enable Nomura to centrally control access to an unlimited amount of doors and areas across not just the Angel Lane site, but also every other Nomura office in the world including its remote data centres.

It consists of one enterprise server that provides global management of a number of independent regional servers. The enterprise server acts as central storage area for system configurations and stores cardholder information and transaction history. The regional servers function independently as local databases while sharing information with the enterprise server.

“ The Honeywell Pro-Watch solution is fantastic! It's a robust, resilient and flexible security management system capable of integration. Integrating it with our own PeopleSoft® human resource system and intranet saves us significant administrative time by eliminating repetitive data entry associated with managing and aligning cardholder information and access rights. ”

Andy Williams, Head of Security (Europe, Middle East and Africa)

Nomura
