

When High Security Is A Must—Not An Option

A security platform that provides fundamental protection of critical assets

Honeywell's new Vindicator® Standard Edition (SE) security platform is designed to protect the most critical industrial and commercial assets. The platform is supported by our new security network V3 Head-end Server—enabling embedded, integrated processing of alarm, access control and video surveillance events. Additionally, the new Vindicator Command and Control 2 (VCC 2) is the critical user-interface component of the Vindicator SE solution. With extensive monitoring capabilities coupled with the power, simplicity and reliability of the V3 Head-end Server, it's the perfect solution for the protection of high-end commercial, industrial and critical assets.

The simple, sleek design of Vindicator® Standard Edition makes it ideal for standard, out of the box installations—delivering high security without the high cost.

CUSTOMER BENEFITS

- Increased operator value with integrated intrusion, access control and video event monitoring
- User-friendly, map-based display of all system event information
- Comprehensive situational awareness via event history, status point icons and cordon drawing
- Automated assisted response procedures increase response accuracy and decrease response time
- Embedded V3 firmware is impervious to hacking and worm/virus attacks
- On-board cryptography, sensor and reader inputs/outputs reduce points of failure in the field
- Ability to communicate over any existing infrastructure keeps deployment costs low
