Smart Wireless Integrated Fire Technology (SWIFT™) Applications

Honeywell

RAPID INSTALL and DISMANTLE

CO – In a matter of weeks, two large, temporary buildings were constructed for the **World Ski Championships** - one to house VIP ticket holders while the other supported global media broadcasts 24/7. Clean aesthetics and **proven reliability** were strict demands, but the rapid install and dismantle of the SWIFT systems were key.

NY – A **4-story building** was being renovated for new office tenants and SWIFT was chosen to be the building's full **fire protection solution**. Why SWIFT? Simply because the building owner demanded wireless!

WIRELESS DEMANDED

CA – When the **oldest building in town** is painstakingly restored to showcase its original beauty and serve as a national landmark and hotel, it deserves a **dependable system** that won't harm its exquisite décor and historic significance - SWIFT competently met these demands head-on.

CA - An **eclectic village of upscale boutiques**, offices and restaurants utilized SWIFT monitor modules for sprinkler monitoring and **avoided running wire through multiple structures** of thick wood, brick and concrete block.

COST and LABOR SAVING BENEFITS

MINIMAL VISUAL CHANGES

NC – A **posh equestrian center** comprising horse stalls, indoor riding areas, a lounge and office space opted to protect its occupants with a **hybrid wired/ wireless system**. SWIFT wireless devices were installed throughout the barn to protect its newly renovated, decorative ceilings, while traditional wired devices covered the remaining areas - all connected to a single fire alarm control panel. Most importantly, the fast installation and **minimal visual changes** within the barn prevented its four-legged residents from being disturbed.

SWIFT™ SMART WIRELESS INTEGRATED FIRE TECHNOLOGY

SC – Installed solely as an elevator recall system, a **low-rise condominium complex** with a working fire alarm system **avoided a costly upgrade** to add the code-mandated elevator recall functionality.

PA – If you're a **country club** that hosts local dignitaries, you can't afford to close your doors for a lengthy fire alarm renovation. SWIFT offered a **fast solution** that **meets code** and doesn't mess with elegant décor.

FAST SOLUTION

BUDGET FRIENDLY

IL – A **place of worship** that welcomed its parishioners for more than a century was in major need of a fire alarm overhaul that was both **budget-friendly** and took into account the building's age. Using SWIFT wireless detectors, and the wireless monitor modules for manual pull stations at every exit, the install was a **quick and worry-free** success.

MA – A nearly **100-year-old mansion,** now used as a site for religious retreats encompasses immense stone walls and heavy wood construction. A quick site survey proved SWIFT an **effective fire alarm solution** that can avoid evasive drilling, while supporting its historical conservation and minimalist interior facade.

HISTORICAL CONSERVATION

Smart Wireless Integrated Fire Technology provides **secure**, **reliable communication** to the fire alarm control panel across a **highly-reliable Class A mesh network**. Great for applications where it is costly, obtrusive, or possibly dangerous to use traditional wired devices.
