

## CELL-CAB-N & CELL-MOD Cellular Fire Alarm Communicators

### General

The CELL-CAB-N and CELL-MOD are cellular communicator options for NOTIFIER FireWarden-X Series addressable fire alarm control panels (FACPs).

These GSM communicators provide cellular communication as an alternate method of central station reporting. Combined with the FACP's onboard communicator, they provide dual path cellular and IP reporting capability, while eliminating the need and cost of separate dialer capture modules and special programming. Battery backup from the control panel maximizes overall system efficiency.

Small in size, easy to install, with a programmable supervision time of 1-60 minutes, these communicator models can be positioned remotely from the fire alarm control panel via 4-wire serial bus for optimum reception. The CELL-CAB-N and CELL-MOD are UL 864 and NFPA 72 fire code compliant for sole, primary, or backup communications. They work with AlarmNet® to provide a UL-listed connection to the central station.

The CELL-CAB-N includes a GSM communicator within a metal cabinet enclosure with lock and key and includes an external antenna. The CELL-MOD houses the GSM communicator in a plastic enclosure and has an option for an external antenna.

### Compatibility

The CELL-CAB-N and CELL-MOD are compatible with the following FireWarden-X Series FACPs:

- NFW-50X: 50 point addressable FACP
- NFW-100X: 198 point addressable FACP

### Features

- Communicate directly with FireWarden-X Series panels
- Easy installation - no need for special programming or separate dialer module
- Battery backup provided by the panel to increase system efficiency and decrease cost
- Provide dual-path cellular and IP reporting capability
- UL 864 and NFPA 72 code compliant for sole, primary, and backup communications
- Easily managed accounts through on-line management tools
- Remote mounting up to 6,000 feet (1,828.8m)
- Quality of Service (QOS) diagnostics via AlarmNet convey vital communicator information such as when messages are received, signal strength, and message path used
- Programmable supervision time from 1-60 minutes
- Provide full data reporting using Contact ID format
