

TBL-70

Tabletop Controller

Honeywell's INNCOM TBL-70 is a tabletop controller component in the Integrated Room Automation System. It is a multi-purpose device, configurable with 1 to 9 touch-capacitance sensors or dimmer bars, and is designed for convenient bedside guest control of lighting, temperature, drapes and sheers, privacy, make-up room and other service requests.

TBL-70 Tabletop Controller

OVERVIEW

The TBL-70 comes equipped with an on-board photo light sensor which detects the light level in the room and automatically adjusts the intensity of the backlighting.

As a component of an Integrated Room Automation System, the TBL-70 provides a high-level of convenience to the room occupant in turning on pre-selected lights in the room or just the night light before retiring. Drape and sheer controls allow the occupant to open or close them easily without having to walk to a window or balcony doors. It can also enable the privacy or make-up-room request indicators on the corridor plate or in centrally controlled systems at the workstations.

The controllers are low-voltage and are connected to the control devices via the S5 Bus local network or wireless RF.

FEATURES & BENEFITS

Optional ecoMODE®
The customer has lighting, drape, blinds and temperature control without leaving the comfort of the bed

RF Wireless Communication
S5Bus connectivity

Customizable Glass Touch Surface
Can accommodate up to 9 individual buttons and/or 3 dimmer bars

May be integrated with the INNCOM Room Automation System over the Deep Mesh Network with INNCOM's INNcontrol 3 software

Backlit Illumination keys, text and icons
Guest annunciation privacy and make-up-room request buttons and LEDs

TBL-70 Tabletop Controller

SPECIFICATIONS	
DIMENSIONS	5.0" W x 4.25" H x 2.75" D (125mm W x 110mm H x 70mm D)
POWER IN	12 VDC, 500mA
STANDARD COLOR	Black housing with customizable color optional face plate - refer to your sales representative
MAXIMUM # OF INPUTS	1-9 touch capacitive buttons and/ or 3 dimmer bars
APPROVALS	FCC Listed
