

The Alerton VisualLogic® VLC-660R-E is a versatile, BACnet-compliant, fully programmable field controller, with three software-controlled high-current relays. The VLC-660R-E is well suited for unit ventilator and fan-coil applications, or any application that requires multi-speed fan or motor control. As a native BACnet controller, it integrates seamlessly with your BACnet system, communicating at up to 115 Kbps on a BACnet MS/TP LAN.

The VLC-660R-E supports the Alerton Microtouch™, as well as the BACtalk® Microset, Microset II, and Microset 4intelligent wall sensors, which offer convenient data display, setpoint adjustment, and technician access to equipment setup parameters.

All VLC-660R-E control logic is programmed using Alerton's easy-to-learn graphical programming language, VisualLogic®. Programming and setup data are stored in non-volatile flash memory, ensuring stable and reliable operation.

High-resolution 16-bit universal inputs are auto-selectable for thermistor, dry contact, pulse, 0-5 V, 0-10 V, or 4-20 mA. Isolated relay contacts are rated to handle motor loads of 120VAC-1HP, 240VAC-2HP, and 277VAC-3/4HP; as well as general purpose loads of 120VAC @ 15A and 240/277VAC @ 10A.
