

features

- Windows PC Software
- 32 bit coding
- Clear User Interface
- Intuitive
- Off-line system configuration

The Dimension Configuration Tool (DCT) has been designed to aid the installation, maintenance and commissioning of Dimension series analogue addressable Morley-IAS Fire Alarm Systems.

Using this simple tool systems can be configured off site. All devices, location text and zone information programming can all be set prior to visiting site. Once on site the complete system programming can be communicated to the panel at a push of a button.

Any modifications can easily be performed and archived for reference on the next site visit.

Each site file has been designed to allow general reference information to be recorded along with the site specific programming information. Record the date of the next site visit, items that will require checking or notes on access and key contact names and phone numbers.

The software package has been divided into screens. Each screen dealing with a specific aspect of the control panel programming. Individual screens are provided for :

- Programming of all devices on the loop, including device text.
- Programming of all peripheral devices.
- Programming of Zone Text.
- Programming of Outputs.

DCT also provides other standard Windows features allowing file operations, cut and paste of devices or device text and a quick reference link to the programming manual.
