Advanced Multi-Criteria Fire/CO Detector IDP-FIRE-CO

The IDP-FIRE-CO is a plug-in, addressable device that provides both fire and carbon monoxide (CO) detection. For fire, the detector combines four separate sensing elements in one unit (smoke, CO, light/flame, and heat) to sense multiple components of a fire. This approach enables enhanced sensitivity to real fire with heightened immunity to nuisance particulate. For CO, the detector's electrochemical sensing cell creates a separate signal for life safety CO detection.

Released through the incomplete burning of various fuels, CO is a colorless, odorless and deadly gas that is virtually impossible to detect with the human senses. Because the potential exists for dangerous levels of CO to accumulate in almost any building, legislation mandating the use of CO detection in commercial spaces continues to increase across the U.S. and Canada. The IDP-FIRE-CO is listed to the UL 2075 standard for system-connected life safety carbon monoxide monitoring.

The IDP-FIRE-CO should be used in conjunction with the B200S/B200S-LF intelligent sounder base (sold separately), which can generate either a Temp 3 pattern for fire or a Temp 4 pattern for CO alarm indication. With each sounder base carrying a unique address, the FACP can then command an individual sounder, or a group of sounders, to activate. The command set from the panel can be tailored to the specific event, allowing selection of tone, and group. For more information on the B200S/B200S-LF refer to Data Sheet P/N 351564.

IDP-FIRE-CO can also be used with the B210LP 6" standard base, the B200SR sounder base or the B224RB relay base.

Low:	4% per foot (30.48 cm) of smoke. Used in equipment rooms, kitchens, paint shop.
Medium:	3% per foot (30.48 cm) of smoke. Moderately clean environments: Used in hotel rooms, dorm rooms.
High:	2% per foot (30.48 cm) of smoke. Clean environments: Used in offices.

Warning: After the CO cell has reached the end-of-life, the CO sensor no longer provides life safety protection. However, when the fire detector enters Photo, Thermal, Infrared (PTIR) mode, the following sensitivities apply:

Level 1:	1% per foot (30.48 cm) of smoke. Very clean environments- Used in laboratories.
Level 2:	2% per foot (30.48 cm) of smoke. Clean environments - offices.
Level 5:	3% per foot (30.48 cm) of smoke. Moderately clean environments- Used in hotel rooms, dorm rooms.
Level 6:	Thermal alarm at 135° F (57° C).

CO Monitoring UL Standard Reference - Alarm Thresholds are as follows:

Parts Per Million	Detector Response Time
70 ± 5 ppm	60-240 min.
150 ± 5 ppm	10-50 min.
400 ± 10 ppm	4-15 min.

Note: Per UL Standard 2075, the IDP-FIRE-CO has been tested to the sensitivity limits defined in UL Standard 2034.
