New Simplified Software Pricing Models for CLSS

New, Intuitive, And Easy Solutions to Drive Faster, More Accurate Fire Response

Honeywell Fire recently rolled out a simplified billing platform that makes purchasing, billing, project bidding with fire.honeywell.com, and spend tracking much easier. We are pleased to announce an upcoming release of simplified pricing that makes those processes easier and supports backend accounting based on the services provided.

We have simplified the service offerings to two main solutions: 1) test and inspect software and 2) monitoring. This allows you to choose your needs based on your customers' requirements. The CLSS platform is flexible, and you can add or drop additional features and licenses to your subscriptions if your project needs to change.

While they work together best, you have the option of selecting either Checkpoint, which is testing & inspecting software, and/or Enhanced Monitoring to customize the features and licenses in your subscriptions as your project needs to change. We will offer a range of add-on SKUs to leverage to get the most out of each site.

- **CheckPoint:** Test and inspect any building with any fire system. Pricing is based on building size. For buildings with a CLSS Gateway or Pathway XP version, you can upgrade to *CheckPoint Premium,* which unlocks time savings by silencing, acknowledging, resetting panels, and more during the test and inspection process.

- **Enhanced Monitoring**: Central station alerting, unlimited facility manager licenses for fire system status visibility, sharing panel information when in alarm with first responders, and a faster, more accurate fire response where available. Pricing is simple and flat regardless of if you have a CLSS Pathway or CLSS Gateway.

We are also simplifying our model for Self-Test to a lower flat price per detector, assuming that you are installing 80% of the building with Self-Test detectors on a new install. The subscription also grants you access to use the Self-Test technology unlimited times over the year (versus 90 days).

To support our partners prior to the new pricing release, we have extended our activation of first-year free licenses from September 30, 2023, to December 1, 2023, which was previously communicated here. Any existing licenses due for renewal will move to the new pricing described here on December 1, 2023.

Pricing will be released in the next few weeks, and details will be available on CLSS Site Manager. We encourage you to join us for the webinar on September 26th that will cover this in more detail. Click here to register for the webinar.

Please reach out to your regional sales manager, customer service representative, or email CLSS Support if you have any questions.
