NAPCO StarLink Fire Alarm Communicators Now Support Honeywell Connected Life Safety Services (CLSS)

Honeywell Fire is pleased to announce a collaboration with NAPCO Security Technologies and Honeywell's Connected Life Safety Services (CLSS) incorporating all NAPCO StarLink fire alarm communicators with the CLSS Cloud Solutions. Effective immediately, active NAPCO StarLink Commercial Fire Alarm Communicators can be imported into Honeywell CLSS.

- ***CLSS Site Manager*** provides a "bird's eye" view of all your accounts and real-time information on event generation so you can diagnose before dispatch. Reduce unnecessary trips and improve your first-time fix rate.
- ***CLSS CheckPoint*** digitizes the test and inspection process so you can easily generate standardized reports ensuring proper documentation, compliance, and storage of each report reducing the time and labor needed to complete annual inspections properly.
- ***CLSS Facility Manager*** provides end users with event alerts via automatic push notifications and access to asset information across multiple sites through the web or mobile app.
- ***All fees for NAPCO StarLink*** *Communicators are billed directly from NAPCO ComNet with no additional fees from Honeywell.*

To add a NAPCO StarLink fire communicator to Honeywell CLSS, first login to CLSS Site Manager and select the "Feature Activation" icon from the main menu. Next, choose "NAPCO" from the list of features and then click the "INSTALL NEW" button. From there, simply add your customer site information and enter your NAPCO serial number and NAPCO dealer number to link your NAPCO StarLink communicator to Honeywell CLSS.

We appreciate your business and continued support of Honeywell's Connected Life Safety Services.
