Marketing Bulletin M23.1SS

As Honeywell Fire continues our innovation journey, we are preparing to launch our new L-Series AV device portfolio with LED technology developed for indoor and outdoor applications based on our strong core L-Series design.

This transition brings a major technology upgrade from our existing Xenon-based portfolio because the LED-based solution draws significantly lower current versus previous Xenon bulb technology across a full candela range. Lower current draw increases design flexibility for Notification Appliance Circuits (NAC) and reduces power supply requirements, yielding simplified installations and lower costs.

The launch of our new LED portfolio will be phased as per the below table:

Group	Product Category	Planned Order Date for LED	Planned Last Order Date for Xenon
Indoor	Strobe only and Horn Strobes	October 2023	15-Dec-23
	Speaker Strobes	November 2023	15-Dec-23
	Chime Strobes	February 2024	1-Apr-24
Outdoor	Strobe only and Horn Strobes		
	Speaker Strobes		

In advance of the LED-based AV portfolio launch, we want to help you drive this technology transition and ensure effective LED technology adoption through the remainder of 2023. We recognize that there will be active projects which may still require existing Xenon-based products. To initiate this technology transition, we propose the following approach:

Please review your active project pipeline and segregate projects that CAN and CANNOT be transitioned to LED. For the ones that CAN be transitioned to LED, we recommend that you start to transition the indoor AV products from Xenon to LED. This will likely require considerable effort and planning on your side.

In recognition of your effort and willingness to partner with us in this important transition, for projects that CANNOT transition to LED, we would like to offer a limited-time discount of an additional 10% on the effective net price to support our ESDs. This discount is available for orders placed on or before September 30, 2023, for delivery in 2023. This discount will only apply to specific parts.

Please refer to this Promo Code and Xenon SKUs document for a list of products included in this limited offer and promo code. Please use the correct part number and promo code (AV2023) when placing your orders. If you have questions about utilizing a promo code in our system, please refer to this document.

Beginning on November 1, 2023, Honeywell will begin raising Xenon SKU prices as part of our transition plan. Here is the list of soon-to-be-discontinued Xenon SKUs, their equivalent LED replacement products, and a summary of our transition plan.

We will release more product details and documentation for the new LED products shortly, but in the meantime, you can find a draft of the datasheet here. Also, be on the lookout for a webinar invitation covering the new line in the next few weeks.

Please contact your Regional Sales Manager with any questions regarding this announcement. Once again, we look forward to working closely with you and supporting this technology transition.
