CLSS Gateway Integration with AES

Honeywell Fire is excited to announce the latest addition to our lineup of fire alarm communicators now available. The CLSS Gateway, HON-CGW-MBB, integrates with the AES 7707 Fire Subscriber Unit. This latest innovation is enabled through an ethernet connection from the Gateway to the AES Subscriber unit.

The powerful Connected Life Safety Services (CLSS) cloud solutions can be leveraged through the gateway. Embrace the built-in inspection, test, and maintenance features to save time and effort during compliance testing, or simply extend access to the CLSS Facility Manager Solution to your customer.

HON-CGW-MBB with option Cell Module CCM-VZ-HON or CCM-ATT-HON

AES 7707 Subscriber Unit

Communicator Features:

- Compatible with Gamewell E3 and S3
- Transmits alarm signals from the fire panel over the digital cellular network, IP network, or mesh network to your monitoring station
- Ability to Utilize your AES Network
- No need for dialers or DACT E3

Please contact your Regional Sales Manager if you have any additional questions.

Sincerely,

Joseph Parisi
