Product Announcement

IPGSM-4G Commercial Fire Radio – FDNY Approval

October 31, 2016

NOTIFIER is pleased to announce that the IPGSM-4G commercial fire radio is now approved by the Fire Department of New York (FDNY) for installation in New York City. IPGSM-4G firmware versions 3.0.0 or later will now allow fault times to be field-selectable between one to sixty minutes duration using AlarmNet 360™. This setting will allow the IPGSM-4G to meet FDNY requirements for annunciation of a fault to a central station within five minutes when configured for 2010 IP and Cellular operation.

IPGSM-4G provides field-configurable supervision and fault times to meet many local codes and jurisdictional requirements for central station communication. Offering this flexibility can also help reduce unnecessary service calls due to temporary maintenance communication troubles.

Below you will find a table with the selectable supervision intervals and the configurable fault times using AlarmNet 360 with IPGSM-4G Versions 3.0.0 or later.

Selected Com. Path	Supervision Interval	Default IP Fault Time	Default GSM Fault Time	Selectable Fault Times
2010 GSM	5 minutes	N/A	5 minutes	1-60 minutes
2010 IP	5 minutes	5 minutes	N/A	1-60 minutes
2010 IP & GSM	24 hours	1 hour	1 hour	1-60 minutes
2013 GSM	1 hour	N/A	1 hour	1-60 minutes
2013 IP	1 hour	1 hour	N/A	1-60 minutes
2013 IP & GSM	6 hours	1 hour	1 hour	1-60 minutes
