

Document No. M22.8

### Ivory Detector Update

Since we introduced white detectors and modules three years ago, we have seen a dramatic decrease in the volumes of ivory products. As Sameer Agrawal stated in his recent Introduction and Operational Update, we need to focus our resources on serving you with offerings that provide the most value to you.

Between lower volumes, commodity shortages, and the overall inflationary pressures, we have reached the point where our most efficient and cost-effective short-term path for ivory detectors is to execute a one-time purchase of resin material and microchips that we estimate will cover up to a year's worth of volume. We will allocate production and supply chain resources over the short term to consume all available materials for the ivory devices. Orders will be fulfilled on a first-come, first-served basis. Based on historical order volumes and our existing backlog we anticipate that we will no longer be able to manufacture any of these ivory devices after June 24th, 2022, for a period of 9 months (April 2023). We will re-evaluate demand and supply conditions and share the next production update in Q4 of 2022. The list of affected models is noted below.

**As a result, the price of ivory detectors will increase by 50% effective immediately. All orders must be received by May 27, 2022, to be included in the upcoming production build.**

We apologize for the inconvenience this may cause, but we expect this initiative will allow us to provide better support across our entire detector portfolio.

Thank you for your business,
