New Reflective Imaging Beam Smoke Detector

February 11th, 2019

Dear Valued NOTIFIER Customer,

The next evolution of beam smoke detection is now available from NOTIFIER. Open-area Smoke Imaging Detection (OSID) offers a reliable and cost-effective smoke detection solution for open spaces. These new addressable and conventional, single ended, reflective beam smoke detectors are directly replacing the FSB-200(A), FSB-200S(A) and BEAM1224(A) models.

The new models work with many of the same accessories as the previous models including the reflector, test switch stations and mounting kits, while offering the following advanced features:

- Intuitive LED guided alignment - Speed up installation and insure reliable and accurate alignment to the center of the reflector
- High resistance to false alarms – Resists building movement up to +/-1°, solid object intrusion and light sources
- Automatic sensitivity threshold setting – Saves time during installation
- Long range coverage - to 100 meters; no separate kit needed
- Loop powered solution – Addressable model only
- Easy maintenance and servicing - Remote test station capable and heater option is standard

The new beam detector is available to order now! Please contact your NOTIFIER Customer Service Representative at 1-800-289-3473 to place orders.

NEW MODEL	LEGACY MODEL	DESCRIPTION
FS-OSI-RI	FSB-200, FSB-200S	Intelligent beam detector with reflector, UL listed
FS-OSI-RIA	FSB-200A, FSB-200SA	Intelligent beam detector with reflector, ULC listed
OSI-R-SS	BEAM1224, BEAM1224S	Conventional beam detector with reflector, UL listed
OSI-RA-SS	BEAM1224A, BEAM1224SA	Conventional beam detector with reflector, ULC listed
