Subject: Weatherproof back box for Spectralert® Advance Outdoor Products

The new line of SpectrAlert Advance Outdoor horns, strobes and horn/strobe units is shipped with a custom fitted outdoor back box. This outdoor back box is different than used on the previous line of SpectrAlert products. The new SpectrAlert Advance outdoor wall and ceiling mount horns, strobes and horn/strobes are not listed for use with the previous outdoor back box (model number WBB). Weatherproof devices and weatherproof back boxes may be ordered separately. Model numbers for weatherproof back boxes ordered separately are SA-WBB for wall mount and SA-WBBC for ceiling mount. This allows electricians the ability to install the SA-WBB and conduit prior to fire professionals who later can install the notification devices. The replacement devices ship with mounting plate only and are noted with an -R suffix on the model number (i.e., P2RK-R).
