

Technical Bulletin

Summary:

L-Series Product Continuous Improvement

Models:

System Sensor L-Series AV Notification Appliances: Horns, Horn Strobes, Chimes, Chime Strobes (Wall and Ceiling Models)

Product Update:

Based on customer feedback, we are pleased to announce further updates to the L-Series line of notification appliances. We have modified the mounting plate to be more rigid, see the picture below. We have also added a metal screw insert for the front product mounting screw to ease installation.

Product with the latest continuous improvements can be identified in the field by a yellow label on the box that states “**NEW DESIGN WITH RIGID MOUNTING PLATE**” and yellow labels on both the mounting plate and appliance itself.

No field action is recommended, however, replacement mounting plates are available free of charge through our customer service (number below). Orderable part number **MPUNVL**, is a 5-pack of mounting plates which includes the proper screw to use with the new metal screw insert. It will work with L-Series horns, horn strobes, strobes, chimes and chime strobe products. The metal screw insert is also being added to the speaker and speaker strobe mounting plate moving forward.

Initial Release

New

We thank our customers for your feedback on these products and we will continue to provide continuous improvements to our products.
