	Status: Active
	Type: SI / SMS

Product – Part affected:
Compatibility of 34000 slave devices with S-Quad

Details:
It has been discovered that the 34000 slave relay and Slave LED devices are not compatible for use with S-Quad. To accommodate the Strobe functionality in S-Quad it uses the same channel that 34000 used to control the slave devices. The result of this is that versions of S-Quad without sounders or strobe will not control the slave devices. Strobe and sounder devices are capable of controlling the slaves but to avoid confusion, this application is not going to be supported.

S-Quad should therefore not be designed to be installed with 34000 slaves and these devices will be withdrawn from the range.

If there any sites with this combination in place you should review this with Technical Support to ensure that the design will operate properly.

Action:
Ensure all sales and engineering staff are aware of this issue.
