Technical Bulletin	TB 10191

To: Gent by Honeywell, System Integrators	Date: 1/11/2013
	Status: Active
	Type: SI

Product – Part affected:
Release of commissioning tool 1.28 service pack 1

Details:
We are releasing services pack update for commissioning tool v1.28. This will resolve the following issues.

1) Inclusion of the device type S3 mkII Sndr Flsh (mark 2 sounder strobe) in the drop down under S-quod.
   This is to cover new release of mkII S-cubed sounders that have been released. See TB 10187

2) Fixed an issue where sectoring was removed from vigilon voice interfaces channels on retrieval, if the interfaces were safe addresses. You had to re address the channels before uploading each time.

Action:
Ensure all engineers are aware of changes.

The services pack can be found at www.gentexpert.co.uk under download, vigilon, vigilon commissioning tool.

We would recommend upgrading to services pack 1 at your earliest opportunity.
We would not suggest working on systems with vigion voice interfaces attached without first installing this services pack.
