Application Note

B200SR Sounder Base Application Note

February 5, 2010

Overview

The B200SR sounder base released in October 2009 has many new features, including a separate mounting plate for easier wiring, greater junction box compatibility, enhanced aesthetics, higher sound output and jumper selectable Temporal-3 or Continuous tone operation. While the B200SR is fully backwards compatible with existing installations of B501BH series sounder bases, the higher sound output requires 35 mA of alarm current. B501BH series alarm current is 15 mA. Please evaluate the system battery calculations for replacement and retro-fit applications.

B501BH-2 and B501BHT-2 sounder bases are no longer available. Orders for B501BH series bases will be filled with B200SR bases. Please contact NOTIFIER Customer Service at 1-800-289-3473 to place an order for the B200SR.

Questions

Please contact NOTIFIER Technical Service at 1-800-289-3471 or Notifier.Tech@honeywell.com with any technical questions on this notice.
