ADDRESSABLE FAAST FLEX

Addressable FAAST FLEX offers seamless integration with both legacy and newly released Honeywell Fire Alarm Control Panels (FACPs). This enhances communication, supports configuration and troubleshooting activities, reduces installation and maintenance costs, and provides improved control over the device.

VALUE PROPOSITION

FOR Optimizers and Maintainers working in small-medium warehouses, cold storages, and small rooms

WHO NEED A reliable and cost-effective ASD, ease of installation and configuration, remote/centralized control to keep TCO low

HONEYWELL'S FAAST FLEX addressable AP/CLIP

PROVIDES Reduced installation and maintenance costs compared to standalone devices, while delivering top-tier performance for an entry-level ASD

WE DO THIS BY Providing an integrated, loop based ASD option for customers using AP/CLIP systems

CUSTOMER PAIN POINTS

- Complex installations, commissioning and expensive troubleshooting: Addressable FAAST FLEX offers fast installation and configuration along with simple and cost-effective diagnostics
- Poor assessment of installation quality: FAAST FLEX + ASPIRE provides precise information on both designed and actual transport times and airflow performance

QUALIFYING QUESTIONS

- Are reduced commissioning and maintenance costs a priority for your organization?

TARGET CUSTOMERS

Integrators and distributors operating in price-sensitive markets

TARGET MARKETS

Warehouses, small and medium logistics, commercial offices, government buildings, hospitality, and elevator shafts.

FEATURES & BENEFITS

- **Native integration** with AP (Advanced Protocol) and CLIP (Classic Loop Inteface Protocol)
- **Fast installation and commissioning** via DIP switches or the Bluetooth app
- **Improved detection performances** thanks to Blue light LED
- **Full integration** with ASPIRE design and simulation Software
- Complete range of **spare parts**, including detector, aspirator, covers, adapters, internal and external filters
- **Certifications:** EN 54-20, EN 54-17, VdS, CE, RED

WHERE DO WE WIN

- **High performance aspirator**: Supports up to 105 meters of straight pipe.
- **Internal mesh filter:** Provides enhanced filtration performance while maintaining low flow resistance based on internal testing.
- **Blue LED technology:** Optimized to support performance in Class B and C applications when installed according to design guidelines (up to 48 holes in Class C with 2 channels, and 32 holes in Class B). 1 or 2 channels for flexible design.
- **Powerful design Software (ASPIRE):** Flexible design, built-in filters and accessories, 3D visualization, and automatic BOM generation.
- **Easy and reliable field firmware upgrade tool:** Connect a USB driver and updates are done automatically. If any issue occurs, the system safely reverts to the previous firmware. Designed with a safe revert firmware mechanism intended to minimize the risk of interruption during updates.
