

SPYDER MODEL 7 VAV SYSTEM ARCHITECTURE

As a freely programmable VAV controller with universal I/Os, Spyder™ Model 7 controllers give you the configuration flexibility to meet a wide variety of application needs.

Spyder Model 7 works with BACnet/IP or BACnet/MSTP, Sylk™ bus technology, Modbus RTU RS-485, universal inputs, analog outputs, and solid-state relays.

Installation is efficient and cost effective, thanks to a mobile app for convenient testing and balancing, as well as smart engineering and commissioning tools via Niagara WEBS-N4 workbench.
