

Agent and Water Releasing

E3 Series®

Protecting important assets is key to maintaining business operations and safeguarding the people in your building. That's why the Gamewell-FCI E3 Series by Honeywell now supports agent and water releasing applications.

It also provides intelligent control to minimize damage, and real-time notifications with proper emergency procedures to help ensure a safe and timely evacuation. It's a complete, integrated fire safety product that enables unlimited system flexibility for any application.

Suppression Without Confusion

One of the biggest challenges with today's releasing panels is the lack of important emergency information. Most competitive systems use a small text display and LED, causing confusion and chaos during an already stressful situation.

The E3 Series is the exception. It has a 4.3-inch color touchscreen display that indicates all fire alarm and releasing events on a simple, easy-to-use interface for clarity when you need it most.

FEATURES

- Incomparable “building block” design means fewer, smarter modules can be used for standalone, networked, voice evacuation, and mass notification type systems
- Broadband data transmission sends and receives messages over a single pair of wire or fiber at 625K ARCNET, making design, installation, and troubleshooting easy and economical
- Networkable up to 122 nodes
- Supports up to 900+ releasing zones
- High-resolution, 4.3-inch color touchscreen display
- Fire alarm, voice evacuation, mass notification, and releasing capabilities under one system
- Unique hazard LED for non-fire events like carbon monoxide or gas
- Available Ethernet port for programming, monitoring, and diagnostics
- Supports 30+ solenoid valves

Releasing Applications:

- Telecommunication, Datacenters
- Hospitals
- Aerospace, Airports
- Oil & Gas, Chemical
- Manufacturing
- Education
- Government

Grow with Your Building

The E3 Series provides 8 releasing zones per ILI intelligent loop module with up to 159 releasing module outputs. This flexibility makes the system customizable to any environment. Increase releasing zones by simply adding an ILI loop module so you don't have to replace the entire system – saving you time and money.

Fire Alarm Detection
Including Carbon Monoxide

E3 Series Fire Alarm/ECS/Releasing System
