

# data protection

**Your lobby is your first line of defence and your visitor's first impression.** With increased threats, the traditional method of using a log book and generic visitor tags leaves you vulnerable. Information written in the logbook can be illegible or false, resulting in an inaccurate record of your visitors and no warning that your visitors aren't who they say they are. Competitors, hackers and suppliers can also read your logbook and gain confidential information about your business. The LobbyWorks visitor management system offers a better alternative to meet these challenges. With LobbyWorks™, visitors are identified, potential threats are flagged, expected visitors are pre-authorized, badges are issued, sponsors are notified, and visitors are tracked while on the premises.
