

FireVoice 25/50

For Clear Sound — The Clear Choice

NOTIFIER'S FireVoice 25/50 is a versatile voice evacuation system designed for quick, easy integration with new or existing fire alarm systems. Engineered specifically for small to mid-size applications, the FireVoice 25/50 is optimal for auditoriums, dormitories, schools, theatres, restaurants, churches, museums, and retail stores.

The FireVoice 25/50 will evacuate building occupants for many different types of emergencies. Whether it's fire, weather events such as tornados, hurricanes, or earthquakes, industrial accidents or medical alerts, the FireVoice 25/50 will broadcast one of five custom programmed messages throughout the building. In addition, authorized personnel can deliver live instructions using the system's integrated microphone. Built in tone generators, digital message repeaters, and optional zone splitters bring even more flexibility. Expand the FireVoice 25/50's capabilities by adding telephone system interface and paging options.

Such advanced features make the FireVoice 25/50 a perfect compliment to any NOTIFIER fire alarm control panel. Activated via contact closure, NAC polarity reversal or EIA-485 data interface, the FireVoice 25/50 offers seamless integration with the fire alarm system, speeding installation, programming, and overall system acceptance.

Improved Public Safety

Voice evacuation is the preferred method for quickly alerting building occupants to an emergency and guiding them safely out of the building. Conventional devices such as horns, strobes and sounders do not always offer adequate information, especially in unique emergency situations where time is critical. For incidents such as chemical spills or tornados, custom messages can alert occupants to the location and type of emergency, and provide them with thorough exiting instructions.

Multi-Functional

The FireVoice 25/50's multi-functional capability offers an all-in-one solution for your building communication needs. Services for background music, general paging and telephone paging can all be accomplished through the

FireVoice 25/50. These features virtually eliminate the need for additional audio systems and equipment such as speakers, amplifiers, and microphones.

Superior Features

The FireVoice 25/50 stores up to five 12-second field recordable messages. When alert tones are required, a built-in tone generator lets users play custom-select tones before and/or after voice messages. In-house paging for everyday communication can be done from an integral or remote microphone, or via your telephone system. In applications where "evacuation by zone" is required, the optional FireVoice 25/50 Zone Splitter produces eight distinct zones of evacuation.

Service and Support

NOTIFIER products and services are offered through an extensive array of authorized Engineered Systems Distributors. These distributors are ready to assist you in the design, installation, commissioning and management of your FireVoice 25/50 Evacuation System.

To learn more about the FireVoice 25/50 or other NOTIFIER products call (203) 484-7161 and ask for the distributor nearest you. Or visit us at www.notifier.com.
