Honeywell

Sales Application Sheet:

CLSS Gateway – Advanced Notifications

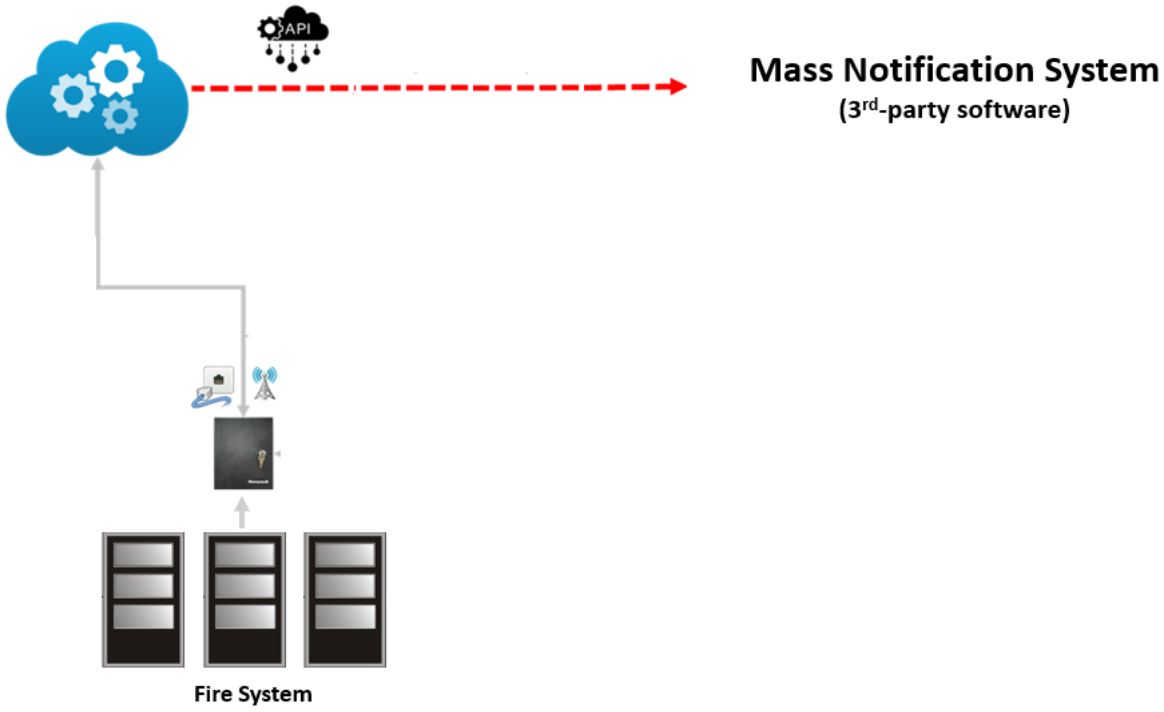

Overview

The **CLSS Gateway - Advanced Notifications** feature provides a communications link between Honeywell fire systems and third-party software systems, allowing fire system events to be distributed to third-party Mass Notification Systems. The CLSS Advanced Notifications feature uses APIs to present life safety system events to Mass Notification Systems and supports a broad network of third-party MNS providers.

Application Notes

CLSS - Advanced Notifications is an invaluable solution for mid-size sites (Education, Healthcare, Manufacturing, Commercial/Mixed-Use sites) or large applications (wide area campuses) – to integrate the life safety system with Mass Notification providers to communicate critical information efficiently and reliably and improve the safety of building and campus occupants in emergencies.
