Storage Solutions

While the American Petroleum Institute does not specifically require removal of HF from the alkylation unit for maintenance turnarounds, many of our customers prefer to deinventory their HF and count on Solstice's services throughout the process. Not only does this increase safety, it provides an opportunity to inspect the acid drum and lines. Transferring the inventory to a sister facility involves logistics planning and requires safe-handling expertise. Fortunately, Solstice has you covered:

Truck Transportation Of HF Acid To A Sister Location

Features two Solstice-employed drivers trained in safe material handling

Railcar Storage

Because we have the largest HF railcar fleet, we can provide unmatched flexibility for temporary storage onsite or at a nearby location
