

HF MOCK INCIDENT TRAINING

An important aspect of Solstice's commitment to safe and reliable transportation of hydrofluoric (HF) acid is emergency preparedness. We offer on-site HF training that includes mock incidents so customers and local emergency responders receive hands-on practice addressing realistic scenarios.

Emergency Preparedness through realistic training

Provided by Solstice's training experts, a "mock incident" simulates an HF emergency at your location using Solstice training props. Both Anhydrous and Aqueous HF training trailers and a railcar protective housing prop are available to be used. Some benefits of our hands-on Mock Incident Training include:

- A realistic simulation tailored to meet your needs.
- The agreed upon training props are sent to your location on a mutually agreed date.
- Responders have the opportunity to practice HF emergency response safely and efficiently.
- In collaboration with you, Solstice experts oversee the mock incident from start to finish.
- Feedback is provided post-event.

Hands-on Practice Improves Responder Readiness

When it comes to gaining the confidence and expertise to effectively handle an HF emergency, hands-on practice in realistic conditions is essential. Solstice's Mock Incident Training provides a unique experience that is unmatched in the industry.

- Solstice training equipment is the same as what responders would see at a real incident.
- Participants become familiar with protective equipment worn during an HF emergency.
- Solstice experts closely monitor the training to prevent potentially unsafe conditions.
