PRODUCT INFORMATION

The Bitrex Fit Test Kit provides you with everything required to perform a qualitative Fit test of a respirator.

The Bitrex fit test kit helps ensure that the wearer of a respirator is achieving a good fit and seal of the respirator to prevent any contaminants they are working with from leaking into the respirator.

Qualitative fit testing is a simple pass/fail test based upon the user's subjective assessment of the leakage, via the face seal region, of a test agent. The test is relatively simple to perform and is suitable for disposable respirators and re-usable respirators.

The facepiece fit testing will result in a personalised fit test .

Refer to AS/NZS 1715 : 2009 for more information on conducting a Fit Test.

PRODUCT INFORMATION

Fit testing of disposable and reusable respirators

Bitrex Sensitivity Solution: This solution is used to ensure the person being fit tested can detect the taste of Bitrex at very low levels.

Ingredients include 95% Water, 5% Sodium Chloride and less than .1% Denatonium Benzoate. Box contains 6 solution applicators. Each applicator contains solution to perform approximately 3 fit tests

Bitrex Fit Test Solution: This solution is used in conjunction with the person being fit tested wearing a respirator, and checks that the respirator is fitted correctly. A correct fit can be determined if the person being fit tested cannot detect the taste of bitrex.

Ingredient include 95% Water, 5% Sodium Chloride & less than .2% Denatonium Benzoate. Box contains 6 applicators. Each applicator contains solution to perform 4m approximately 3 fit tests.
