Overview

Key Features

Breathing tube section close to face is soft and flexible for maximum flexibility. Section behind back will not kink and interrupt air supply. Connects to facepiece cartridge connections quickly and easily - no tools required. Converts the 5500 and 7700 Series half masks, and the 5400 and 7600 Series full facepieces into a continuous flow supplied air respirator. Swivel connection rotates 360 degrees so connection stays secure, no matter how much workers move around. Y' breathing tube design goes over the shoulders so breathing tube is out of the way, lower profile on half masks to fit under welding helmets and faceshields.
