

## PRODUCT NOTICE

### SPM Flex

#### Dust Separator Accessory Kit for Select Gases

Regions Affected: **GLOBAL**

Dear Customer and Colleagues,

Please be advised that Honeywell® has developed an SPM Flex® Dust Separator Accessory Kit for customers experiencing high background faults in select Diisocyanates and Hydrazine applications. Reactive or sticky gases absorbed on exposed surfaces in combination with dust particles can tend to gather a layer of dust, thus potentially blocking the optics systems in a gas detection unit.

The Dust Separator Accessory Kit enables the dust to be separated externally to the unit. Thus, allowing for longer intervals of monitoring by allowing the customer to replace filters, bypass or virtual impactor on their own time and schedule, while reducing nuisance faults.

#### Affected Gas Detection Applications

| Gases             | Where Used   |
|-------------------|--|
| Di-isocyanate TDI | Production of flexible foams   |
| Hydrazine         | Used as gas, jet fuel, propellant, mixtures found in air bag foaming |

#### Part Numbers

| Part Number | Description                           |
|-------------|---------------------------------------|
| SPMF-DUST   | DUST SEPARATOR ACCESSORY KIT FOR SPMF |

Please be advised that this Accessory Kit is only for retrofitting and thereby must be installed by trained Honeywell Service. We will have a follow-up communication regarding availability and ordering of new SPM-Flex factory fitted with Dust separator.

We appreciate your business and look forward to serving your gas detection needs into the future.

Regards
