

HONEYWELL FIBRE METAL SAFETY HELMET

Look Up. Look Down. Helmet – On.

The new Honeywell Fibre Metal Safety Helmet is the head protection solution providing extra safety. It always stays on, delivers excellent impact absorption, secondary eye protection, great visibility and enhanced all-day comfort without neglecting style.

MEET YOUR PERFECT FIT. ALL ACCESSORIES INCLUDED.

Wearing safety headwear is of utmost importance in many industries, especially when working above ground. While offering protection against falling debris, moving objects, or low beams, regular hard hats don't always provide the best fit.

Therefore, workers need to adjust them repeatedly to prevent them from falling. Hard hats can tumble off due to the head movements required by different job activities or in the event of a fall, leaving the wearers unprotected and exposing them to high risks of sustaining severe head injuries.

Honeywell Fibre Metal Safety Helmet is created to deliver enhanced safety, excellent fit and improved comfort, complying with all applicable industrial safety standards, driving costs down while providing peace of mind.

EXTRA SAFETY AND COMFORT

As each person's head is different, the personal protective equipment (PPE) should be adjustable. Equipped with a three-point chinstrap and a six-point ratchet suspension, Honeywell Fibre Metal Safety Helmet offers a secure fit, excellent impact absorption and enhanced adjustability.

Moreover, its low profile and balanced weight distribution reduce neck strains and increase wearing comfort. Made of ABS, Honeywell Fibre Metal Safety Helmet ensures high impact resistance and withstands extreme temperatures ranging from -22° F to +122° F (-30° C to +50° C).

GREAT VISIBILITY AND SECONDARY EYE PROTECTION

Enhance worker's safety with Honeywell Fibre Metal Safety Helmet's included certified polycarbonate visor that offers a secondary level of protection. In conjunction with the required safety glasses or goggles, it further shields the eyes against debris, wind, dust and particles. Moreover, the micro brim enables optimal visibility, providing a wide field of view.

KEY INDUSTRIES

- Construction (residential and heavy)
- Utilities
- General contractors
- Timber operations
- Maintenance crews
- Manufacturing
- Mining
- Oil and gas

MULTIPLE FEATURES AND ACCESSORIES

When spending eight or more hours a day wearing head protection, every safety or comfort helps workers improve their work productivity. Choose the cooling efficiency you desire with the vented helmet or benefit from protection against electrical hazards with the non-vented helmet.

With a modern design and providing excellent durability, Honeywell Fibre Metal Safety Helmet is a win-win situation for everyone – the worker benefits from improved safety and the company from fewer head protection replacements.

KEEP YOUR HELMET ON

- Three-point buckle chinstrap for a secure fit and improved adjustability
- Six-point ratchet suspension for excellent impact absorption
- Low profile and balanced weight distribution for increased comfort
- Resistant to extreme temperatures -22° F to +122° F (-30° C to +50° C)
- ABS shell for great impact resistance and durability
- Included certified polycarbonate visor for extra protection
- Micro brim enables a wide field of view
- Vented version for higher cooling efficiency
- Non-vented version for protection against electrical charges
- Modern design – motivates workers to wear head protection
- Elastic band clips for accessories (headlamps)
- Certifications
 - ANSI Z89.1 – 2014 low temperature (LT)
 - ANSI Z87.1 – 2020 for visor
 - NOM (Mexico)

THE SAFETY RISKS OF WORKING ABOVE GROUND¹

- Falling from any height, even from a ladder, being struck by heavy equipment, or getting hit by falling objects are everyday risks in the construction, oil and gas, utilities and many other industries. More than 200 construction workers are killed and more than 10,000 are seriously injured by falls each year throughout the United States.
- Construction workers sustain more traumatic brain injuries than employees at any other type of workplace in the United States, according to the National Institute for Occupational Safety and Health (NIOSH).
- Between 2003 to 2010, more than 2,200 construction workers died due to a traumatic brain injury. Traumatic brain injuries represented one-quarter of all construction fatalities.
- More than half of fatal work-related traumatic injuries result from falls – particularly from roofs, ladders and scaffolds.
- Traditional hard hats only protect the top of your head against falling objects. In case of slips, trips and falls from ladders, roofs, or walls, traditional hard hats are likely to fall off even before the worker does. This happens because of the natural tendency of the head to snap back in such situations.
