

COMMCOMMAND™

REMOTE PUSH-TO-TALK

CommCommand Remote Push-To-Talk

Designed for firefighters and hazmat teams, Sperian offers a remote push-to-talk (RPTT) for the CommCommand Radio Communication System that enables the use of radio communication in extreme and hazardous conditions.

An extra large push-to-talk lever securely attaches to and wraps around the Sperian lapel mic, providing a sophisticated multi-function mic.

This unique design saves fire departments thousands of dollars by allowing them to purchase one lapel mic for all aspects of firefighting. The Sperian RPTT enables communication for daily activities, EMS, fire scenes, confined space and the most sophisticated hazmat scenarios.

The Sperian lapel mic with RPTT can be clipped to bunker gear as well as underneath protective hazmat clothing, allowing full concentration on the actual task.

Regardless of conditions – heavy black smoke or bright daylight – the Sperian lapel mic with remote push-to-talk provides firefighters a large area to press to activate communication, eliminating the need to fumble and search for the standard push-to-talk button on the lapel mic.

- Oversized remote push to talk lever works great with a gloved hand or finger.
- Simple installation on a Sperian CommCommand lapel mic.
- Interfaces with the Sperian CommCommand Wireless Radio Communication System.
- Lightweight.
- Incorporates a streamlined design which does not create snag or catch points.

Push-To-Talk Lever

Note: Lapel mic and radio not included
