

UNDERSTANDING THE EN352:220 STANDARD

You may notice we added expiration dates to our earplugs in order to stay in compliance with EN352:220. The reason for this update is to stay within the regulations of a country we sell hearing protection to that requires use by/expiration dates to be added to all earplugs. Currently, there are no regulations in place for the US or Canada. Since many of our earplugs are meant to be used right away or are disposable, this should not be an issue of concern on the customers end.

You will now see earplugs sold by Honeywell with a 5-year use by expiration date. Again, we are adding these to stay in compliance with the regulations required in a country we service. There are currently no regulations in the US or Canada that require us to use shelf-life dating.

For over 50 years, Honeywell Howard Leight™ has been committed to making industrial hearing protection personal. We're continually developing new designs, materials and technologies to enhance comfort and protection for industry trade professionals and beyond. Howard Leight™ has made it their mission to protect workers, recreational and competitive shooters, DIY homeowners, sporting event and live music fans against hearing loss. Whatever your passion, trust Honeywell Howard Leight™ to block out the noise so you can listen to what's important.
