Customer Support

Technical Assistance

To search our knowledge base for a solution or to log in to the Technical Support portal and report a problem, go to honeywell.com/PSStechsupport.

For our latest contact information, go to sps.honeywell.com.

Product Service and Repair

Honeywell International Inc. provides service for all of its products through service centers throughout the world. Go to sps.honeywell.com and select Support > Productivity to find a service center near you or to get a Return Material Authorization number (RMA #) before returning a product.

For ongoing and future product quality improvement initiatives, the mobile computer comes equipped with an embedded device lifetime counter function. Honeywell may use the lifetime counter data for future statistical reliability analysis as well as ongoing quality, repair and service purposes.

CN80 Non-Incendive (NI) Versions Only (CN80-L0N-xxxxx1F and CN80-L1N-xxxxx1F)

⚠️ Warning: Explosion Hazard - Substitution of components may impair suitability for Class I, II, III Division 2 locations.

Limited Warranty

For warranty information, go to sps.honeywell.com and click Support > Productivity > Warranties.

This chapter introduces the Dolphin CN80 Mobile Computer. Use this chapter to learn about the basic computer features, functions, and accessories.

About the Dolphin CN80 Mobile Computer Series

Dolphin CN80 mobile computers, built on the Mobility Edge™ platform, deliver real-time connectivity, advanced data capture, and future-proof investment protection. A large touchscreen with the option to choose between a 40-key QWERTY keypad or 23-key numeric function keypad provides the flexibility to fit current and future application environments. All CN80 models are equipped for fast Wi-Fi connectivity with a WLAN 802.11 a/b/g/n/ac radio and Bluetooth (v5.0) technology that includes Bluetooth Low Energy (BLE) support.

CN80L1N models provide additional connectivity with a wireless WWAN radio for high speed data and quality voice support across all network technologies. CN80 WWAN models also include an integrated global positioning satellite (GPS) receiver that supports GPS protocols including, Simultaneous GNSS Receiver Support for GPS, GLONASS, Galileo, and BeiDou GPS.

CN80L0N models are available with either a N6603ER (1D/2D) high performance imager or an EX20 Near/Far (1D/2D) high performance 2D imager for long range scanning applications up to 15.2 m (50 ft).

Honeywell offers heater-equipped cold storage CN80 versions to extend the use of the mobile computer in cold storage and freezer environments as well as Non-incendive (NI) CN80 versions for use in hazardous environments.

Note: Throughout this manual, all versions of the mobile computer are referred to as the CN80 unless information is specific to a particular model type.

Note: The Settings app varies by computer model and OS version. Your computer may not include all of the features shown throughout the manual.

*For information on supported Android OS versions, see the CN80 Data Sheet, available at sps.honeywell.com

**Note:** To learn more, see Specifications, beginning on page 113.
Features of the CN80 Mobile Computer

CN80 Model with N6603ER Imager

- Scan Button
- Microphone
- Power Button
- Battery Status /Notification LED
- Speaker
- Microphone
- Touch Panel
- Scan Status LED
- Aux Button
- Scan Button
- Speakers
- Keyboard (model dependent)
- I/O Connector
Note: The EX20 Near/Far Imager is only available for CN80L0N models.
About the Optional Dust Cover

The dust cover can be used when additional I/O connector shielding is desired.

Install the Dust Cover

Unlock the Dust Cover

About the Battery

The computer uses a rechargeable 3.85 V Li-ion battery as its main power source. The battery has a 22.3 watt hour capacity. Several factors determine the life of your battery, such as display brightness, display timeout, input device, extreme temperature, and usage.

Dolphin CN80 computers are designed for use with batteries manufactured for Honeywell International Inc. See Battery Identification on page 8 for guidance on the correct battery for your unit configuration.

For a list of compatible accessories, see the CN80 accessory catalog, available for download on from the product device page at sps.honeywell.com. Contact your local sales representative for replacement ordering information.
Battery Identification

Not all batteries are the same due to computer model and/or configuration variations. Use the table below to identify the appropriate battery replacement for your computer model.

<table>
<thead>

Battery Recommendations and Safety Precautions

This section provides additional information on the safe use, handling and storage of the Lithium-ion rechargeable battery designed for use with the computer.

To learn more about Battery Maintenance for Portable Devices, go to honeywell.com/PSS-BatteryMaintenance.

Safety

Caution: Before you attempt to charge or replace the battery carefully read all labels, markings and product documentation provided in the box or online at sps.honeywell.com.

Caution: Improper battery replacement or incompatible device usage may result in risk of burns, fire, explosion, or other hazard. Dispose of lithium-ion batteries according to local regulations. Risk of fire and burns if improperly handled. Do not open, crush, heat above 50°C (122°F), or incinerate.

Caution: Ensure all components are dry prior to mating the computers and batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.

- Do not store the battery at temperatures above 50 °C (122 °F), such as inside a car on a hot day or in direct sunlight. Storage above 50 °C (122 °F) may damage the battery.
- Avoid dropping the battery or computer. If you suspect that the battery or computer is damaged or if intermittent power and charging issues occur, send the relevant device(s) to a Honeywell service center for inspection of the computer and/or battery. To learn more about returns refer to Product Service and Repair on page iii.
- Do not use the battery if it is noticeably deformed, swollen, or discolored. Replace immediately and discard as noted in the Caution at the beginning of this Safety section.
- Do not use the battery if it is too hot to handle. Replace immediately and discard.
- Discarded batteries may create a safety hazard. Before disposal, cover the battery contacts with electrical insulating tape.
- Do not modify the battery or attempt to insert foreign objects into the battery.
- Do not solder directly to the battery contacts.
- Do not drop the battery or apply mechanical shocks or pressure to the battery.
- Do not immerse batteries into, or expose them to, water or seawater.
- Do not incinerate, microwave, throw into a fire, or expose batteries to temperatures above the maximum rating.
- Do not disassemble a battery or try to open or penetrate its housing.
- Stored batteries should be separated, not touching any other battery, device, charger, or accessory.
- Do not store or carry batteries where they are in close proximity to or touching conductive material (metal). For example, in a pocket where zippers, coins and office supplies (e.g., pens, paperclips) could also be located.

**CN80 Non-Incendive Models**  
(CN80-L0N-xxxxx1x and CN80-L1N-xxxxx1x)

x = configuration variation. Configuration number (CN) is located on the label in the battery well of the mobile computer.

In addition to the precautions in the previous section, the following safety statements apply to CN80 Non-incendive (NI) models:

**Warning:** Explosion Hazard - Batteries must only be changed or charged in an area known to be non-hazardous. Use ONLY Honeywell battery part number CX80-BAT-EXT-WRLS1 for CN80 NI Models.

⚠️ **Avertissement:** Risqued’explosion-Les batteries doivent uniquement être remplacées ou rechargées dans un endroit non dangereux. Utilisez UNIQUEMENT Honeywell batterie P/N CX80-BAT-EXT-WRLS1 pour les modèles CN80 NI.

**Warning:** Battery must be locked when using the CN80 NI in a hazardous environment.

⚠️ **Avertissement:** La batterie doit être verrouillée lors de l'utilisation du NI CN80 dans un environnement dangereux.

**Warning:** Additional spare batteries must not be carried in hazardous areas.
Warning: The device must be protected from impacts with high-impact energy, permanent UV light emission, and high electrostatic discharge processes.

Warning: Read About the Optional Dust Cover on page 7.

Use and Storage

When setting up the computer, you should consider how apps, services, and UI settings affect battery power consumption. Set the screen timeout feature to turn off the screen sooner and enable the Adaptive brightness feature to minimize battery use. Restrict unnecessary apps or services from running in the background to prevent battery drain. Utilize the Battery saver and Battery manager features to conserve power. Turn on Airplane mode to conserve battery power if network connectivity is limited or is not needed.

Keep in mind that Lithium-ion battery capacity declines over time due to stress from repeated charge-discharge cycles and environmental factors such as extreme operating/storage temperatures and humidity. As the battery lifespan/health declines, the battery energy dissipates more quickly or may take longer to charge.

Remember that the battery self-discharges slowly over time, even if the computer is turned Off or the battery is stored outside the computer. Environmental factors such as extreme temperature and humidity affect self-discharge rates and can impact the battery lifespan.

Follow the recommendations below for battery use and storage.

- For maximum battery life, charge the battery at 20 °C (68 °F) to 25 °C (77 °F) and store at 10 °C (50 °F) with a 30% charge.
- Use only Honeywell-approved charging methods and devices. See Charge the Battery Before Use on page 11. Use of this battery in other devices could result in damage to the device or battery.
- Replace the battery only with a Honeywell replacement battery. See Battery Identification on page 8 for guidance on the correct battery for your unit configuration. These batteries have been tested in accordance with applicable safety standards. Contact your Honeywell sales representative or distributor if this battery is no longer available.
- Batteries should be replaced periodically, typically every two years or if the battery health falls below 70% (see Check the Battery Level, Health and Usage on page 16).
- Promptly recharge the battery or replace battery with a charged battery when you notice the battery status icon indicates the charge is low.
- Avoid allowing the battery to be completely drained since this applies stress on the battery and may shorten lifespan.
- Do not store batteries in a charger that is not connected to power.
• If you are storing the computer for a few days (e.g., over the weekend), install a fully charged battery or connect the computer to a power source.

• If you are storing the computer for longer than a few days, remove and charge the battery. When the battery is done charging, store both the battery and the computer separately in a cool and dry location. Periodically check the battery charge level. This is especially critical when storing batteries for several months since the battery will gradually self-discharge and a fully drained battery can impact the battery lifespan.

Charge the Battery Before Use

Dolphin CN80 computers ship with a partially charged battery. Fully charge the battery before using your computer for the first time.

You can charge the battery with a Dolphin CX80 series charging accessory before or after you install the battery in the computer. A fully discharged battery charges in approximately 4 hours.

**Note:** Honeywell recommends using Honeywell accessories and power adapters. Using non-Honeywell accessories or power adapters may cause damage not covered by the warranty.

**Warning:** Ensure all components are dry prior to mating the computers and batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.

To charge the battery before you install it in the computer:

• Insert the battery into the CX80 Quad Battery Charger or the battery well of a Home Base or Ethernet Home Base.

To charge the battery after installing it in the computer:

• Insert the computer into a CX80 Home Base, Ethernet Home Base, Charge Base, Net Base, Snap-on Adapter, or Vehicle Power Adapter.

**Note:** Using the computer while charging the battery increases the time required to reach a full charge.

Change the Battery

If your battery power is low, you need to either charge the battery in the computer or replace it with a charged battery. (See also Check the Battery Level, Health and Usage on page 16.)

**Warning:** If you have a CN80 NI model certified for use in hazardous locations, read About the Optional Dust Cover, page 7.
To replace the battery:

1. Save your files and close any open applications.
2. Press and hold the **Power** button until the options menu appears.
3. Tap **Swap Battery**. Follow the on-screen instructions to place the unit in battery swap mode.
4. Release one end of the hand strap.
5. Slide the battery latch to the right.
6. Lift up on the edge of the battery and remove it from the computer.

7. Insert the charged battery into the computer.

8. Press down on the edge of the battery to engage the lock.
9. Attach the hand strap.

10. Press the **Power** button.

### About the Battery Status

Use the battery icon in the Status bar at the top of the screen to see the charge level of your battery. If you want more detailed information on your battery, such as usage time, charge remaining on the battery, or battery health information, open the **Settings** app and tap either **Battery** or **Honeywell Settings > Battery Optimizer**.

#### Battery Status Icons

<table>
<thead>
<tr>
<th>Icon</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="icon1.png" alt="Battery 100%" /></td>
<td>The battery charge is at 100%.</td>

<tr>
<td><img src="icon2.png" alt="Battery 50%" /></td>
<td>The battery charge is at 50%.</td>
</tr>
<tr>
<td><img src="icon3.png" alt="Battery Low" /></td>
<td>The battery charge is low. You need to charge or replace the battery soon.</td>
</tr>
<tr>
<td><img src="icon4.png" alt="Battery Critical Low" /></td>
<td>The battery is critically low. You need to replace the battery now or connect the computer to a charging accessory.</td>
</tr>
<tr>
<td><img src="icon5.png" alt="Battery Charging" /></td>
<td>The computer is connected to external power and the battery is charging.</td>
</tr>
<tr>
<td><img src="icon6.png" alt="Battery Error" /></td>
<td>There is a battery error. Install another battery. If the problem persists, contact Honeywell Technical Support.</td>
</tr>
</tbody>
</table>

The Battery status LED appears in the upper right corner of the touch screen. The LED color and behavior (e.g., steady on, blinking, off) indicates the charging status of the battery. To view status descriptions and to learn how to modify the Battery LED behavior, see **About the Battery Status LED Setting** on page 15.
About the Battery Status LED Setting

You can change the behavior of the Battery status LED if the out-of-box behavior for a charging battery (blinking green) is not acceptable to your environment.

You can choose one of three options:

- **Default Battery LED** (optional Android OS configuration)
- **Honeywell Battery LED** (factory default, out-of-box configuration)
- **Mix Mode**
- **No Battery LED**

Default Battery LED Behavior (Optional Android OS Configuration)

<table>
<thead>
<tr>
<th>Connected to Power</th>
<th>LED State</th>
<th>Description</th>

</tbody>
</table>

Honeywell Battery LED Behavior (Factory Default/Out-of-Box Configuration)

<table>
<thead>
<tr>
<th>Connected to Power</th>
<th>LED State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>Blinking amber</td>
<td>Battery level is below 15%</td>
</tr>
</tbody>
</table>
Select the No battery LED setting if you want to use the LED as a notification LED for applications or device management solutions. For more information on how to use the LED as a notification LED, see http://developer.android.com/guide/topics/ui/notifiers/notifications.html.

### Change the Battery Status LED Behavior

To change the battery status LED behavior:

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings > Honeywell Settings > Battery LED**.
3. Choose one of the options:
   - **Mix Mode**
   - **Default Battery LED** (optional Android OS configuration)
   - **Honeywell Battery LED** (factory default/out-of-box configuration)
   - **No Battery LED**

### Check the Battery Level, Health and Usage

In addition to the Battery status icon and LED, you can use one of the following methods to monitor the battery status:

1. Swipe up from the bottom of the Home screen to access all apps.
2. Select one of the following:
   - **Settings > Battery**
     The current percentage of battery power remaining and the amount of usage time left on the battery appear on the screen. You can also access the **Battery saver** feature from the battery screen.
   - **Settings > Honeywell Settings > Battery Optimizer**
     View battery status, health and app usage information. Create and enable or
disable a battery optimization profile that implements a group of settings to conserve power.

- **Power Tools > BattMon**
  Refer to the Power Tools user guide available at [sps.honeywell.com](http://sps.honeywell.com) for more information.

---

**Power On the Computer**

After you have fully charged and installed a battery, power on the computer for the first time:

- Press and hold the **Power** button for approximately 3 seconds, and then release the button.

---

**Welcome Screen**

The first time you power on the computer, a Welcome screen appears. You can either scan a configuration barcode or use the Wizard to manually set up the computer. To learn more about how to **Scan Barcodes**, see page 55.

During the manual setup process, follow the prompts on the screen as the wizard has you:

- Set the default language.
- Set up the Wi-Fi network connections.
- Set the time, date, and time zone.
- Personalize (name) the computer.
- Set up security and privacy options.

Once you complete the initial setup, the Welcome screen no longer appears when you power on the computer and **Provisioning mode** is automatically turned Off (disabled). Scanning a barcode to install applications, certificates, configuration files, and licenses on the computer is restricted when **Provisioning mode** is turned Off. To learn more, see About Provisioning Mode on page 94.

---

**Unlock the Screen**

The screen lock automatically activates every time the computer is turned on or when the computer wakes from sleep mode.

- Swipe up from the lock icon at the bottom of the screen.

The level of security provided depends on the type of lock set (e.g., Swipe, Pattern, PIN, or Password). The default setting, Swipe, provides no protection against unauthorized access to your computer.
Change the Screen Lock to Protect the Computer

After you start using the computer, you should change the screen lock to prevent unauthorized persons from accessing the computer after the screen lock activates, unless they input the correct password, PIN, or pattern.

The recommended setting for the Screen lock is to enable a Password lock. Use a strong password value (e.g., include numbers, characters, special characters, and mix character case).

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap Settings > Security > Screen lock.
3. Choose one of the following options:
   - None
   - Swipe
   - Pattern
   - PIN
   - Password
4. Follow the on-screen prompts to complete the setup.

Disabling Ethernet Bridging (In-Dock Communications)

When you place the terminal in the charging dock and establish a connection with a host PC through Ethernet communications, the WLAN radio is deactivated. When the session is dropped, the WLAN radio returns to its previous state. Bluetooth communications, if activated, are not affected.

Note: The charging dock only has a USB connector. For Ethernet support, you need to attach an Ethernet adapter to the charging dock. To order an Ethernet adapter, contact your Honeywell representative.
Select a Touch Screen Profile to Optimize Performance

Optimize screen interactions by selecting a touch screen profile designed specifically for your use case. For example, if you wear gloves, set the touch screen profile to Glove enhanced mode for the best touch screen response.

*Note:* Maximum glove thickness of 2 mm (0.08 inches) for touch screen response.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Honeywell Settings** > **Touch Screen Profiles**.
3. Choose one of the following options:
   - Normal mode
   - Finger enhanced mode
   - Glove enhanced mode
   - Stylus enhanced mode
4. Exit the Settings app.

Configure the Screen Backlight

The display has an ambient light sensor that automatically adjusts the backlight intensity to conserve power and ensure the display is readable. You can also manually set the backlight intensity if you do not want to use the automated adaptive brightness feature.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Display**.
3. Choose one of the following options:
   - To set the brightness level manually, verify the Adaptive brightness feature is turned Off, and tap **Brightness level**. Adjust the slider to set the brightness level.
   - To turn the display screen dark for optimal night viewing, toggle on Dark Theme.
   - To tint your screen amber, turn on Night Light. You can adjust the intensity once the night light is on.

About the Scan Status LED

The Scan Status LED indicates the read status of the imager when scanning a barcode. When active, the LED illuminates the outer ring of the front speaker.
Scan Status LED Descriptions

<table>
<thead>
<tr>
<th>LED Color</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Good read of a barcode.</td>
</tr>
<tr>
<td>Blinking green</td>
<td>The data collection engine is processing or starting up.</td>
</tr>
<tr>
<td>Red</td>
<td>Failure to scan barcode. Check to make sure you have the correct symbology enabled.</td>
</tr>
</tbody>
</table>

To learn more about how to use and configure the imager engine for scanning, see Use the Image Engine beginning on page 45.

About the Keypad

The Dolphin CN80 is available in two keypad configurations.

40-Key QWERTY Keypad

23-Key Numeric Keypad

Keypad LEDs

Special characters and alternate functions are entered by pressing color-coded key sequences. Keypad LEDs indicate when a color-coded modifier key is active or when caps lock is turned On. Models with a QWERTY keypad include a yellow modifier key for typing alternate numbers and symbols. Models with a numeric keypad include both yellow and blue modifier keys for typing alternate characters, symbols, and functions.
Keypad LED Descriptions

<table>
<thead>
<tr>
<th>Status LED</th>
<th>Color</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yellow Modifier Key Status</td>
<td>Yellow</td>

</tr>
</tbody>
</table>

About the Color-Coded Keys

Use the keypad color-coded modifier key(s) and the caps lock function to access all the characters, numbers, symbols, and functions marked on the computer keys.

Enter Characters on the QWERTY Keypad

Computer models with a QWERTY keypad include a yellow modifier key for typing alternate numbers and symbols. A caps lock/shift key is also included for uppercase character input.

To type an alphabetical character:

- Press the relevant character key.

To type a number or special symbol:

1. Press the yellow modifier key.
2. Press the key for the number, symbol or special character.

Example: Press 🟢 and then 🟢 to type the number 1.
To lock the modifier key On and type only numbers, symbols, or special characters:

1. Press the yellow modifier key twice in rapid succession.
2. Press the number, symbol, or special character sequence.
3. Select the modifier key again to unlock the modifier.

Example: Press 🟨.Broadcast and then 🟨.Broadcast to type the number 111.

To type a single uppercase character:

1. Press the caps lock (shift) key.
2. Press the character key.

Example: Press 🅱️.Password and then 🅱️.Password to type the capital letter Y.

To type all uppercase characters:

1. Press the caps lock (shift) key twice in rapid succession.
2. Press the character keys.
3. Press the caps lock (shift) key again to turn caps lock Off.

Example: Press 🅱️.Password and then 🅱️.Password to type COLD.

**Enter Characters on the Numeric Keypad**

Computer models with a numeric keypad include a yellow modifier key and a blue modifier key for typing alphabetical characters and accessing functions.

To type a number:

- Press the relevant number key.

To type an alphabetical character:

1. Press the blue modifier key.
2. Press the key one to three times in rapid succession depending on the position of the character illustrated on the key.

Example: Press 🟦.Password and then 🟦.Password to type “c”.

To capitalize an alphabetical character:

1. Press the blue modifier key.
2. Press the number 1 key to activate caps lock (shift).
3. Press the key one to three times in rapid succession depending on the position of the character illustrated on the key.

Example: Press \[ \text{P1} \] and then \[ \text{F2} \] to type “C”.

To access a function (e.g., F1 - F10):

1. Press the yellow modifier key.
2. Press the key with the function that you want to access.

Example: Press \[ \text{F2} \] and then \[ \text{F2} \] to access function F2.

Note: To lock a modifier key on, press the modifier key twice in rapid succession. To unlock the key, press the modifier key again.

About the Audio Features

The CN80 has multiple speakers, a microphone, and several software tools to configure sound volume or enable vibration feedback.

Adjust Speaker Volume

Use the volume buttons on the left side of the computer to adjust the volume of ringtones, media, notifications, and alarms.

Note: The volume setting varies by OS version.

To quickly change the active speaker level:

- Press either the Volume Up or Volume Down button.

To access the volume quick set menu:

1. Press a Volume button.
2. Adjust the volume level using the on-screen menu.

- Tap the icon at the top to toggle the media volume between Sound On \[ \text{Vibrate} \], Vibrate Only \[ \text{Vibrate Only} \], or Silent \[ \text{Silent} \].
- Use the slider to adjust the media volume.
- Select \[ \text{Media}, \text{Call}, \text{Ring}, \text{Alarm} \] at the bottom to adjust Media, Call, Ring, or Alarm volume levels.
Do Not Disturb

If you need quiet time without interruptions, enable Do Not Disturb to mute sound, stop vibration, and block notifications. Under the full settings menu, you can set a schedule for when you want Do Not Disturb to automatically turn on and off.

To enable Do Not Disturb manually:

1. Swipe down from the top of the screen to view the quick set menu.
2. Tap Do Not Disturb to toggle the feature On/Off.

Audio Settings

This section describes the audio and sound settings you can configure in the Settings app.

- To change audio settings, select the Settings app and tap Sound & vibration.

Sound settings are model dependent. Some settings may not be available for your model type.

About the CN80 Cold Storage Model Heater

CN80 Cold Storage (CS) models come equipped with touch screen and scan window heaters to support extended use in freezers as well as transitions into and out of freezer areas. The heaters can be set to turn On automatically to defrost the touch screen and scan window based on external temperature changes and timers or the user can control the heaters by manually turning them On or Off.

- **Automatic mode**
  
  This is the default mode of operation for the heaters. Automatic mode maximizes battery life in cold storage environments and provides average window defrost times. In Automatic mode, cold storage battery life may exceed 6 hours (scanning a barcode every ten seconds). Window defrost times should be a minute or less with factory default settings implemented.

  If your application requires faster defrost times, you can enable the **Preemptive Heating** (pre-heat) feature to minimize defrost times with average battery life in cold storage environments. This feature slightly reduces cold storage battery life since the heaters enter a low power pre-heat stage before the computer detects a rise in the ambient temperature.

  In Automatic mode with **Preemptive Heating** enabled, the cold storage battery life ranges from a maximum of 6 hours to a minimum of 1.5 hours, depending on the heater **Preemptive delay time** set. The window defrost times range from zero to a maximum of one minute with factory default settings.

- **Manual mode**

  This mode is disabled by default. When enabled, heater activation is controlled solely by the user. No temperature monitoring and timers are used to control the heaters. The user must manually turn the heaters On or Off.

  Use the **Settings** app to configure the **Heater** feature. To learn how, see **Heater Parameters** on page 27.

How Automatic Mode Works

Automatic heater management saves power since the heaters are automatically controlled by the system based on cold storage entry/exit detection.
Cold Storage Entry Detection

In **Automatic** mode, cold storage entry detection occurs when the computer sensors identify a drop in ambient temperature below the defined **Heater enable temperature**. The system starts the **Chill timer** in response to cold storage entry detection.

**Note:** If you remove the computer from cold storage before the Chill timer expires, the timer stops and the system does not turn On the heaters, saving battery power.

A snowflake ❄️ icon appears in the status bar when the Chill timer expires.

Cold Storage Exit Detection

In **Automatic** mode, cold storage exit detection occurs when the sensors identify a quick rise in the ambient temperature.

- If **Preemptive Heating** is disabled (default) and the **Chill time** has expired, the system turns the heaters On at full power when a cold storage exit is detected.

- If **Preemptive Heating** is enabled and the **Chill time** has expired, the system starts the **Preemptive delay time**. When the **Preemptive delay time** expires, the heaters enter a low-power pre-heat stage. Pre-heating keeps the windows warm to minimize condensation and frost when the computer is removed from cold storage, allowing for quicker defrost times. The system turns the heaters On full power when a cold storage exit is detected.

**Note:** When the heaters turn On, the icon changes from a snowflake ❄️ to a heater 🛠️.

Turn the Heaters On/Off in Automatic Mode

When **Automatic** mode is enabled, you can still manually turn the heaters On or Off while in cold storage.

Tap the snowflake ❄️ or heater icon 🛠️ in the status bar.

- If **Preemptive Heating** is disabled, the heater **Preemptive delay time** is not used and pre-heating does not automatically start, but the snowflake icon ❄️ can still be tapped to turn On the heaters for pre-heating.

- If you enabled **Preemptive Heating**, the heater **Preemptive delay time** stops when the icons are used to turn the heater On or Off.

How Manual Mode Works

**Manual** mode gives you full control over turning the heaters On or Off. When **Manual** mode is enabled, automatic cold storage enter/exit detection is no longer used to control the heater behavior. To turn the heaters On or Off, you must tap a button on the Heater screen in the Settings app. Full power is used for defrosting. Manual mode is disabled by default.
Turn Manual Mode On/Off

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap Settings > Honeywell Settings > Heater.
3. Tap the Automatic/Manual button to switch between the Automatic or Manual mode. The active mode appears on the button. When Manual mode is enabled, the Heater On/Heater Off button next to the mode button is active.
4. Tap the Heater On/Heater Off button to control the heaters.

Configure the Heater in the Settings App

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap Settings > Honeywell Settings > Heater.
3. Modify the heater parameters.
4. Tap Update to apply the changes.
5. Tap OK.

Heater Parameters

You can configure the following Heater parameters in the Settings app to fit your specific application environment.

*Note: The list of available parameters will differ between Automatic and Manual modes.*

<table>
<thead>
<tr>
<th>Heater Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heater</td>
<td>Enable or Disable the Heater feature and temperature monitoring. Tap the switch button at the top of the screen to toggle the feature On or Off. The default is On.</td>
</tr>
<tr>
<td>Manual/Automatic</td>
<td>Tap the button to switch between Automatic mode or Manual mode. To learn more about the modes, see How Automatic Mode Works on page 25 and How Manual Mode Works on page 26.</td>
</tr>
<tr>
<td>Turn heater on when the temperature has changed by</td>
<td>Set the sensitivity of the cold storage exit trigger by defining a DeltaT value. To detect a cold storage exit, the computer looks for a quick rise in temperature (°C), over a brief period of time. The default DeltaT value is 0.5 °C.</td>
</tr>
<tr>
<td>Duration: Heater</td>
<td>Set the length of time (minutes) the heaters stay On at full power (100%) once the computer detects a quick rise in temperature (DeltaT value, see above). The default value is 5 minutes. <em>Note: The heaters may turn Off before the timer has expired if a temperature reading indicates the computer is warm enough or you manually turn Off the heaters by tapping the heater icon once.</em></td>
</tr>
<tr>
<td>Heater Setting</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------------</td>

<tr>
<td>Hot Key heater disable</td>
<td>Select a button to use as a hot key for turning the heater Off when <strong>Manual</strong> mode is enabled.</td>
</tr>
<tr>
<td>Low battery threshold</td>
<td>Set a low battery charge threshold (%) that triggers the computer to turn Off the heaters to conserve battery power. The default value is 25%. Note: Setting a value lower than the default of 25% may negatively impact device performance.</td>
</tr>
<tr>
<td>Heater enabled temperature</td>
<td>Set the temperature (°C) that the computer must fall to before the system determines cold storage entry and heater use. Once this temperature is detected, the <strong>Chill time</strong> starts.</td>
</tr>
</tbody>
</table>
| Chill time                     | Set the time limit (minutes) for how long the computer must remain at or below the defined **Heater enable temperature** before the system initiates one of the following actions:  
  • If in **Automatic** mode and **Preemptive Heating** is disabled, the system turns the heaters on when a cold storage exit is detected (see **DeltaT** value).  
  • If in **Automatic** mode and **Preemptive Heating** is enabled, the system starts the **Preemptive Delay Time**.  
Note: If you remove the computer from cold storage before the **Chill time** expires, the system does not turn On the heaters, saving battery power. |
| Preemptive Heating             | Enable or disable **Preemptive Heating** (pre-heating) when **Automatic** mode is enabled. Tap the check box to toggle the feature On or Off.     |
| Preemptive Duty Cycle          | Set the percentage of time that the heaters are on during **Preemptive Heating**.                                                            |
| Preemptive Delay Time          | Set the length of time (minutes) that the computer waits after the **Chill time** has expired before activating the low power pre-heat window feature. |
| Duration: Scanner heater       | Set the length of time (seconds) that the scanner window heater is cycled on.                                                                |
| Duration: LCD heater           | Set the length of time (seconds) that the touch screen heater is cycled on.                                                                   |
| Fast monitoring interval       | Set sampling interval time (seconds) used once the computer detects cold storage entry. Cold storage entry is defined by the **Heater enabled temperature**. |
| Slow monitoring interval       | Set sampling interval time (seconds) used once the computer detects cold storage exit (defined by **DeltaT** value).                         |
| Power on time                  | Set the length of time (milliseconds) between turning on heater power and enabling a heater element. The default value is 10ms.               |
| Disable temperature            | Set the temperature limit (°C) that triggers turning off the heater.                                                                        |
| Blanking                       | Tap the check box to enable or disable heater operation during scanning.                                                                     |
| Update                         | Tap to apply changes made to settings.                                                                                                       |
| Default                        | Tap to set the Heater settings back to their default values.                                                                                 |
Insert a microSD Card

You can use a microSD card to increase file storage capacity or to install software. Honeywell recommends the use of Single Level Cell (SLC) industrial grade microSD or microSDHC memory cards with the computer for maximum performance and durability.

⚠️ **Caution:** Always power off the computer before attempting to install or remove a card.

⚠️ **Warning:** If you have a CN80 NI model certified for use in hazardous locations, read About the Optional Dust Cover on page 7.

**Note:** Format the memory card before initial use.

1. Save your files and close any open applications.
2. Press and hold the **Power** button until the options menu appears.
3. Tap **Power Off**.
4. Release one end of the hand strap.
5. Slide the battery latch to the right.
6. Lift up on the edge of the battery and remove it from the computer
7. Loosen the screws securing the card access door closed. Use the tab to lift the edge of the door.

8. Press down gently and slide the card holder away from the open access door. Lift the edge of the holder up.
9. Insert the microSD card into the card holder with the contacts facing out.

10. Close the holder with the card inserted. Press down gently on the card holder and slide it into the locked position.

11. Close the card access door and tighten the screws.

12. Install the battery and apply pressure to the edge closest to the battery latch.

13. Install the hand strap.

14. Press the **Power** button to turn On the computer.

How to Transfer Files

To transfer files, you need to physically connect the CN80 mobile computer to your workstation (e.g., laptop or desktop computer) through a USB connection. When the mobile computer is connected and USB is configured for file or photo transfer, use a file browser (e.g., File Explorer or Windows Explorer) on your workstation to transfer files between the two computers. If you are transferring files to and from a Mac, use the Android File Transfer application (available from www.android.com/filetransfer).

**Note:** File transfer through a USB connection is disabled by default. You need to configure the USB connection for transferring files or photos.

You can use these accessories to connect your mobile computer to your workstation:

- Home Base or Ethernet Home Base, and a standard USB Type B to A cable
- Snap-On Adapter, Tethered USB Cable client (PN CN80-SN-USB)
Configure USB Connection and Transfer Files

**Note:** The CN80 supports Hi-Speed USB communications (USB 2.0) with a maximum data transfer rate of 480 Mbps.

1. Connect the CN80 to your workstation.
2. On the CN80, swipe down from the top of the screen to see the notifications.
3. Tap the **Android System** notification twice to open the options menu.
4. Select either **Transfer files** or **PTP (Transfer photos)**.
5. Open the file browser on your workstation.
6. Browse to the CN80. You can now copy, delete, or move files between the CN80 and your workstation.

Accessories for the Computer

The Dolphin CN80 ships with a battery, hand strap, and stylus. All other accessories are ordered and shipped separately.

For a complete list of compatible accessories for the CN80 mobile computer series and their part numbers, see the Dolphin CN80 **Accessory Guide**, available for download from the CN80 product page at sps.honeywell.com.

Contact your local sales representative for ordering information.

</tbody>
</table>

**Remap a Button or Key**

You can change the default function of the physical buttons and keys.

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings 🌐 > Honeywell Settings > Keyremap**.

3. Tap the plus sign (+).

4. Press the button or key you want to remap.

5. Tap **OK**.

6. Tap **Keys, Apps, Actions, or Commands** to view the available functions.

7. Select the function you want assigned to the button. The function you selected now appears next to the button or key name.
Restore Default Button Action

To restore the button default action:

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Honeywell Settings** > **Keyremap**.
3. Tap the clean icon.
4. Choose the remapped button(s) you want restored to the default setting.
   - Tap the check box next to the button.
   OR
   - Tap **All Select** to choose all the buttons.
5. Tap **Delete**.

View and Manage Notifications

You can view recent events on the computer, manage system notifications, change a setting or quickly respond to an app notification by opening the notifications panel.

When a notification icon appears in the status bar at the top of the screen:

1. Swipe down from the top of the screen to open the notifications panel.
2. Respond to the notification. You can take one of the following actions:
   - Tap the notification to open the associated app.
   - Tap a quick-reply or action command (e.g., Reply, Archive), if available.
   - Swipe the notification sideways, off the screen to dismiss it. Note that some notifications cannot be dismissed.
   - Slide the notification left or right to reveal the settings icon.
     Choose between **Show notifications silently**, **Don’t silence**, or **More Settings**.

To close the notification panel, swipe up from the bottom of the screen, or tap the Back or Home buttons.
Open Quick Settings

Use the Quick Settings screen for easy access to common settings. Tap an icon to toggle the feature On/Off or to open additional settings.

- To open Quick Settings, swipe down twice from the status bar at the top of the screen.
- To close Quick Settings, tap the top of the screen or the Back or Home buttons.

Customize the Home Screen

You can add application icons to any Home screen for easier access.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap and hold the app you want to add. The computer vibrates, and then switches to a smaller view of the Home screen panels.
3. Drag and drop the app icon into place.
   - If you want to add another home screen, drag the icon to the right edge of the screen before releasing the icon.
   - If you want to create a folder, drag and drop the icon on top of another icon.

To add a Widget or customize the look of the Home screen:

1. Tap and hold an empty section of the screen.
2. Select either Wallpaper & style, Widgets, or Home Settings.

Customize the Favorites Tray

Modify the Favorites tray to contain the apps you use the most.

1. Tap and hold the app icon you want to replace on the Favorites tray.
2. Drag and drop the app on “X Remove” at the top of the screen.
3. Swipe up from the bottom of the screen to access all apps.
4. Tap and hold the icon of the app you want to add.
5. Drag and drop the icon into position on the Favorites tray.
Use Google Search

Use the Google Search field at the top of the Home screen to help you find anything you need on the computer or on the web.

1. On the Home screen, tap inside the Google Search box and begin to type your search term.

   As you type, suggestions from Google web search appear below the Search box, and results from the computer (such as apps or contacts) appear below the web search results.

2. Tap a suggestion to search for it immediately, or touch the arrow to add the term to the search field without starting to search.

About Screen Gestures

Use your fingers or the stylus to manipulate icons, buttons, menus, the on-screen keyboard, and other items on the screen.

- **Tap**
  Tap to select something, toggle a setting On or Off, or activate a field for text entry. An on-screen keyboard automatically appears for text entry.

- **Tap and hold**
  Tap and hold an item but do not lift your finger or stylus until an action occurs.

- **Drag and drop**
  Tap and hold an item, and then slide your stylus or finger across the screen until you reach the target position. Lift your finger or stylus off the screen to drop the item in place.

- **Swipe**
  Quickly move your finger across the screen, without pausing when you first touch. For example, you can swipe a Home screen left or right to view the other Home screens.

- **Slide**
  Slowly move your finger across the screen, without pausing when you first touch. For example, you can slide a notification to the left until the Settings gear is revealed.

- **Double-tap**
  Tap quickly twice on a web page, map, or other screen to zoom in. Double-tap again to zoom out.
• Pinch

In some apps, you can zoom in and out by placing two fingers on the screen at once and pinching them together (to zoom out) or spreading them apart (to zoom in)

Set the Time Zone

The computer gets the current date and time from its network connection. If preferred, you can change this behavior and manually set the time zone for your location.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap Settings > System > Date & time.
3. To change the time, tap Set time automatically to turn Off the feature.
   a. Tap Date then select a date from the calendar and click OK.
   b. Tap Time then use the clock to select a new time and click OK.
4. To change the time zone, tap Use location to set time zone to turn Off the feature.
   a. Tap Time zone and choose the time zone for your location.

About Honeywell Applications

Honeywell applications help you troubleshoot and connect your computer to other devices and networks. Some of the applications in this table are located in the Power Tools app. To learn more about Honeywell Power Tools, go to sps.honeywell.com to download the Dolphin Power Tools User Guide.

Honeywell Applications Available on the Computer

<table>
<thead>
<tr>
<th>Icon</th>

</table>
| ![WiFi Diagnostic Icon](image) | WiFi Diagnostic | Use the application to:  
- View Wi-Fi radio status information about a connected access point or a list of other available access points in range of the Wi-Fi radio.  
- Use the Route utility to view packet destination gateway information across the subnets.  
- Use the IPCconfig utility to view IP parameters for the onboard network adapters.  
- Use the Ping utility to verify communication links or to make sure a specific IP address is working. |
Applications You Can Download to the Mobile Computer

You can download Honeywell applications to extend the capabilities of the computer. You may need to purchase a license to run some applications. To learn more about the applications described in this section and other Honeywell software solutions, go to sps.honeywell.com > Software > Productivity.

About Honeywell Enterprise Browser

Honeywell Enterprise Browser is a locked-down enterprise Web client application designed for Honeywell computers. It provides a controlled Web application environment that helps enterprises increase productivity and reduce IT management expenses. You can configure Enterprise Browser for your specific application requirements and design custom web applications that run through the Enterprise Browser to provide your users with an easy-to-use yet controlled experience.

If Enterprise Browser is not included on your computer model, you can download a trial version for evaluation. After the evaluation period expires, you need to purchase a license. For more information about Enterprise Browser, visit sps.honeywell.com.

About Terminal Emulators

Honeywell offers several terminal emulator solutions that allow users to manage their mobile devices by providing reliable data transfer between the host mobile device and terminal. Terminal emulators can be used for remote management and configuration of devices, data collection and analysis, and session management.

Depending on the computer model, a terminal emulator may come pre-installed on the device. If a terminal emulator is not included on your model, you can download a trial version for evaluation. After the evaluation period expires, you need to purchase a license. For more information, visit sps.honeywell.com

About Honeywell Launcher

Launcher is a configurable locked-down menu program designed for Honeywell computers that prevents end-users from accessing the start menu and other non-authorized applications. Use Launcher to provide a platform where your mobile computer users are limited to running only company-approved applications and prevent them from initiating unauthorized configuration changes. You can also use Honeywell Launcher together with Honeywell Enterprise Browser to create a single-purpose device configuration.

<table>

</tr>
</thead>
<tbody>
<tr>
<td>📱</td>
<td>Wireless Tether</td>
<td>Use to enable range tracking and customize out-of-range alerts for Bluetooth devices paired and tethered to your computer.</td>
</tr>
</tbody>
</table>
If Launcher is not included on your computer model, you can download a trial version of the software for evaluation. After the evaluation period expires, you need to purchase a license. For more information about Launcher, visit sps.honeywell.com.

**About Honeywell UEM Connect**

Honeywell UEMConnect enables customers to use the Google OEMConfig protocol to perform enterprise configuration and enhance the management of Honeywell Mobility Edge devices. It seamlessly integrates with EMM solutions to expose Honeywell management extensions directly on the EMM console. UEMConnect provides exclusive access to over 260 advanced Honeywell proprietary settings and provides supplemental access to standard EMM features. EMM providers may also make use of generic Android APIs to provide standard EMM functionality.

Honeywell UEMConnect is available for download in the Google Play™ store. UEMConnect licenses are included with the purchase of applicable SOTI offerings through Honeywell or may be purchased separately for applicable EMM solutions not purchased through Honeywell.

**Unlock Developer Options**

Developer options only appear in the Settings app if you unlock the feature. If you are a developer working with the computer, you can easily unlock the additional settings to use for testing and debugging applications under development for the computer.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings > About phone**.
3. Tap **Build number** seven times. A message appears informing you that you are now a developer.
4. Tap **Developer options** under **Settings > System**.

**About GMS**

Google Mobile Service includes the following apps: Google, Chrome, Gmail, Maps, YouTube, Drive, Play Music, Play Movies, Duo, Photos, Play Store.
Use this chapter to understand how to scan barcodes, configure the scan settings, and capture images using the integrated image engine in the computer.

About the Image Engine

There are two engine options for the CN80: N6603 and EX20. See Specifications for more information.

You can use the imager in the computer as a scanner or camera.

- Use the imager as a scanner to read 1D and 2D barcode symbologies, composite symbologies, and postal codes. It also supports omni-directional scanning for greater flexibility in real-world settings. By default, the scanner feature is enabled and uses the default scan profile. You can modify the Default Profile or create new profiles for custom applications from the Settings > Honeywell Settings > Scanning.

- Use the imager as a camera to capture black and white images, such as signatures or pictures of damaged inventory. The imager camera feature requires the development of a custom application that uses the Honeywell Mobility SDK for Android. To download the Honeywell Mobility SDK for Android, see Developer Information on page 93.

*Note:* Instead of using the internal imager, you can also use Bluetooth communications to connect the computer to an external scanner, such as the Granit™ 1981i and 1911i.

About the Scan Wedge Feature

The scan wedge feature sends scanned barcode data to an active application as Android keypad input. To scan a barcode as keyboard input, open an application that accepts text input and then scan a barcode. You can use applications that are coded to use the scanner or applications that receive data through the scan wedge feature. If an application claims the scanner through the BarcodeReader API, the scan wedge feature is temporarily disabled.
You can find information on how to create custom applications for the computer in the Software Development Kit (SDK) available for download from the Technical Support Downloads Portal at honeywell.com/PSSsoftware-downloads. Once you create an account and enter the portal, navigate to Software > Software and Tools > Developer Library > SDKs for Android.

### Change the Scanner Settings

Changes you make to the Default profile apply to all applications with no profile assigned.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Honeywell Settings** > **Scanning**.
3. Tap **Internal Scanner** > **Default Profile**.
4. Select from the following:
   - **Data Processing Settings**
   - **Symbology Settings**
   - **Decode Settings**
   - **Imager Settings**
   - **Trigger Settings**
   - **Notification Settings**
5. Modify the settings to meet your application needs.

To learn more about the scanner settings, see Default Scan Settings on page 47.

### Change the Bluetooth Scanner Settings

When the Bluetooth scanner is paired, changes can be made to the Default profile for the scanner.

*Note:* This option is not available on all CN80 models.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Honeywell Settings** > **Scanning**.
3. Tap **Bluetooth Scanner** > **Default Profile** > **Data Processing Settings**.
4. Modify the settings to meet your application needs.

To learn more about the scanner settings, see Data Processing Settings on page 47.
Restore Default Scan Settings

You can easily discard all changes you made to the Default profile and restore the default values.

Note: When you choose the Restore all defaults option from any of the settings screens in a profile, all the settings in that profile return to their default values.

1. Open the Default profile.
2. Tap : in the upper right corner of any of the scan settings screens for the profile.
3. Tap Restore all defaults.

Default Scan Settings

Use the following sections to understand the scan settings available for scanner profiles. To learn how to create a new profile, see page 53.

Data Processing Settings

Use the Data Processing Settings to specify how barcode data is processed by the computer.

Data Processing Settings

<table>
<thead>
<tr>
<th>Setting</th>

</tr>
</thead>
<tbody>
<tr>
<td>\r</td>
<td>13</td>
</tr>
<tr>
<td>\n</td>
<td>10</td>
</tr>
<tr>
<td>\t</td>
<td>9</td>
</tr>
</tbody>
</table>
| \` | `

Wedge as keys | List of character values to wedge as keys, represented as a comma-separated list of decimal values. | 9, 10, 13

Data Editing Plugin | Specify a Total Freedom data editing plug-in and edit plug-in settings. | None

Symbology Prefix | Specify a symbology identifier prefix to the barcode data. Options include:  
- None  
- Honeywell  
- AIM | None

Launch Browser | Enable or disable URL barcode handling. If a barcode starts with http:// or https://, the browser opens using the barcode data as a URL.  
Corresponds to BarcodeReader property: PROPERTY_DATA_PROCESSOR_LAUNCH-BROWSER | Enable

Scan to Intent | Enable or disable special handling of scan-to-intent barcodes.  
Applies to barcodes in one of the following formats:  
```
// ACTION  
// ACTION '$' extra-data
```
Where: ACTION and extra-data are any string of characters.  
Launches an application listening for the intent. Intent action:  
“com.honeywell.scantointent.intent.action.” + ACTION  
Intent extra:  
“com.honeywell.scantointent.intent.extra.DATA” contains the remainder of the barcode data after the first '$' character.  
Corresponds to BarcodeReader property: PROPERTY_DATA_PROCESSOR_SCAN_TO_INTENT | Enabled

Launch EZ Config | Enable or disable special handling of EZConfig barcodes.  
Applies to EZConfig barcodes that are encoded with the Aztec symbology and contain specific header data.  
Corresponds to BarcodeReader property: PROPERTY_DATA_PROCESSOR_LAUNCH_EZ_CONFIG | Enabled
Symbology Settings

Use the Symbology Settings to enable or disable barcode symbologies for the selected scan setting profile.

- Tap the check box next to a symbology name to enable (check mark) or disable (no check mark) decoding for that symbology.
- Tap the symbology name to view and modify additional configuration parameters for the symbology selected.

To view a list of default settings for supported symbologies, see page 115.

Decode Settings

Adjust the Decode Settings when scanning barcodes that are densely packed or poor quality.

### Decode Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data Intent</td>
<td>Enables the reception and processing of barcode data without using an SDK or library</td>
<td>Disabled</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
</table>
| Center Decode      | When enabled, the imager scans and decodes a barcode only if part of the barcode is at the center of the aimer window. This is useful in situations where several barcodes may be very close together in the imager field-of-view.  
  - Tap the check box to toggle the feature On or Off.  
  - Select Center Decode to adjust the Window dimensions.  
  Honeywell recommends leaving the settings at 50 (default) to define the “center” area for the barcode.  
  Configurable parameters:  
  - Window top  
  - Window bottom  
  - Window left  
  - Window right  
  - Aimer Finder  
  - Aimer Finder Timeout | Disabled |
<p>| Decode Security    | Use this setting to control the reading tolerance of the decoder. Lower settings are more lenient when reading low quality barcodes while higher values are more strict. | 2       |
| Decoder timeout    | Set the decode timeout                                                       | 150     |</p>

<tr>
<td>Same symbol timeout</td>
<td>Set the minimum buffer time in seconds before the scanner reads the same barcode. This can be adjusted to prevent inadvertent scans of the same barcode if the code is left in the scan field longer than the Decode Timeout limit. The default same symbol timeout is 1000 seconds.</td>
<td>Disabled</td>
</tr>
</tbody>
</table>

### Add a Scan Setting Profile

To create a scan setting profile for a custom app on the computer:

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Honeywell Settings** > **Scanning** > **Internal Scanner**.
3. Tap **+** in the upper right corner of the app screen.
4. Take one of the following actions:
   - Tap the profile name field, and then add a new name.
   - Tap the **select an application** option, and then choose an app from the list.

The new profile appears on the Internal Scanner profile list. You can now select and modify the scan settings for the new profile.
Delete a Scan Setting Profile

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Honeywell Settings** > **Scanning** > **Internal Scanner**.
3. Tap and hold the profile you want to delete.
4. Select **Delete**, and then select **OK**.

About the Optional Digital Scan Button

By default, the imager is enabled for scanning with the left, middle, and right scan buttons configured to trigger the imager. If your application environment requires use of an on-screen scan button, enable the Digital Scan Button feature in the Settings app. Once enabled, you can then modify the appearance of the on-screen Scan button and select the apps the button appears in.

Enable and Configure the Digital Scan Button

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Honeywell Settings** > **Digital Scan Button**.
3. Tap **Enable Digital Scan Button** to turn the feature on. A preview of the button appears at the bottom of the screen.
4. Configure the button appearance. As you adjust the settings, the preview button updates.
   • Tap **Select Button Size**, and then choose Small, Medium, or Large.
   • Tap **Select Button Color** and then choose from seven color options. Default color is black. Tap a dot to select the color, and then select **OK** to confirm.
   • Use the slider under **Set Transparency Level** to adjust how transparent the button appears on the application screen.
5. Drag the preview button to the location where you want it to appear on the screen. Once you have positioned the button, tap the **Set Button Location** toggle button to lock it into position.
6. Tap **Choose Application**.
7. Check the box next to all the applications where you want the digital scan button to be available.
8. Select **OK**.
9. Tap **Back** to return to the Settings screen.
   
   The digital scan button appears on the screen when you open any of the apps you selected during the button setup. Tap and hold the button to activate the imager and scan a barcode.
Scan Barcodes

By default, the computer imager is enabled for scanning. It supports omni-directional (360°) barcode scanning and an aiming beam is provided to help assist with targeting barcodes.

Before you start scanning barcodes, go to Settings > Honeywell Settings > Scanning > Internal Scanner and modify the scan profile to enable only the barcode symbologies that you need. By reducing the active symbology list, you can increase scan speed.

1. Point the scanner window at the barcode. For optimum performance, avoid reflections by scanning the barcode at a slight angle.
2. Press and hold any Scan button.
3. Center the aiming beam over the barcode. Make sure the entire barcode is inside of the illumination frame.
4. Release the Scan button when the computer beeps, and the Scan Status LED briefly turns on. The barcode information is entered into the application in use.

Note: Not all barcode symbologies are enabled by default. If a barcode does not scan, the correct symbology may not be enabled.

About Scanning Configuration Barcodes

After completing the out-of-box set up process, Provisioning mode is automatically turned Off. Scanning a barcode to install applications, certificates, configuration files, and licenses on the computer is restricted unless you enable Provisioning mode in the Settings app.

To learn more About Provisioning Mode see page 94.
Use the Scan Demo App

Use the Scan Demo app to read barcodes, or to test your symbology decode settings.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap Demos.
3. Swipe left or right on the screen until Scan Demo appears under the turntable. Tap the center of the box image to open the app.
4. Point the scanner window at the barcode.
5. Press and hold any Scan button or tap and hold the on-screen Scan button.
6. Center the aiming beam over the barcode. Make sure the entire barcode is inside of the illumination frame.
7. Release the Scan button when the computer beeps, and the Scan Status LED briefly turns On. Barcode information appears on the screen.

Note: In the Scan Demo app, not all barcode symbologies are enabled by default. If a barcode does not scan, the correct symbology may not be enabled.

Change the Scan Demo Symbology Settings

1. In the Scan Demo app, tap \( \text{\textcopyright} \) in the upper right corner of the screen.
2. Select Symbology Settings.
3. Modify the symbology parameters.
   - Tap the check box next to a symbology name to enable (check mark) or disable (no check mark) decoding for that symbology.
   - Tap the symbology name to view and modify additional configuration parameters for the symbology selected.
4. Tap Back to return to the Scan Demo app.
You can use the phone feature to make and receive phone calls as well as transmit data through wireless wide-area networks (WWANs).

**Note:** Phone features are only supported on CN80 WWAN models (CN80L1N).

### About the Phone

Phone features on the computer include a speaker and a microphone. You can also use a Bluetooth headset or hands-free kit.

On CN80 WWAN models, the phone feature is enabled by default and supports all cellular radio access technologies (2G, 3G, etc.) for voice and data connections around the globe. These features are certified by PTCRB, GCF, and all major US carriers.

CN80 WWAN mobile computers also come equipped with two micro-SIM card slots. You might use the dual SIM feature if you require two phone numbers on UMTS networks and have occasions when you want to use a different carrier or cellular plan for travel.

After you turn on the phone and activate service with your wireless carrier, you can customize the phone features and network settings in the Wireless & Networks section of the Settings app.

**Note:** Both WWAN radios support Network Information and Time Zone (NITZ) messages to automatically set the system time.
About the SIM Selection App

Supported SIM type and activation methods vary by model and model configuration. During the SIM activation process and/or after activation, you may need to utilize the SIM selection app to provision the computer to your specific use case. This section provides information about navigating the SIM selection app and the features available. See Activate the Phone on page 59 for information on how to activate the phone.

Use the SIM selection app to configure the SIMs on the mobile computer. You can select which SIM is being used (SIM1 or SIM2) by assigning a SIM to SIM Slot.

To access the SIM Selection app, swipe up from the bottom of the Home screen to access all apps then tap SIM Selection.

The app home screen shows the current SIM configuration.

![SIM Selection App](image)

**Apply the new configuration**

**Select the SIM to use, SIM 1 or SIM 2**

**Select the mobile carrier.**

We recommend using “Auto” (see next section About Auto Carrier Config Selection).

About Auto Carrier Config Selection

The carrier is selected automatically based on the carrier-provided nano-SIM card. The Carrier Config field is set to “Auto” by default. We do not recommend manually selecting the carrier unless there is an issue with connecting to the WWAN network.

To set the carrier manually, select your carrier’s name from the Carrier Config drop-down list. If there is not an appropriate option, select “ROW” (Rest of World).

**Note:** If you manually configure the Carrier Config but select a carrier that does not match the one on the installed SIM card, you may experience network issues.
Activate the Phone

You use a SIM card to activate the phone on your CN80 WWAN model computer (CN80L1N). You can purchase the micro SIM card from your network provider. Dolphin CN80 WWAN models includes two SIM card slots (SIM 1 and SIM 2) for multiple network provider flexibility.

Warning: If you have a CN80 NI model certified for use in hazardous locations, read CN80 Non-Incendive Models (CN80-L0N-xxxxx1x and CN80-L1N-xxxxx1x) on page 9.

1. Press and hold the **Power** button until the options menu appears.
2. Tap **Power Off** and then **OK** to verify.
3. Release one end of the hand strap.
4. Slide the battery latch to the right.
5. Lift up on the edge of the battery and remove it from the computer.

6. Loosen the screws securing the card access door closed. Use the tab to lift the edge of the door.
7. Press down gently and slide the card holder away from the open access door. Lift the edge of the holder up.

When using a UICC card for NFC Secure Element NFC link encryption, install the card in SIM slot 1.

8. Insert the microSD card into the card holder with the contacts facing out.

9. Close the holder with the card inserted. Press down gently on the card holder and slide it into the locked position.

10. Close the card access door and tighten the screws.

11. Install the battery and apply pressure to the edge closest to the battery latch.

12. Install the hand strap.

13. Press the **Power** button to turn On the computer.
Make a Phone Call

Once the phone is activated, you can make a phone call.

1. Tap 📞 in the favorites tray or press the Phone key 📞 to open the phone app.
2. Use one of the methods below to enter the telephone number you want to call.
   • Press the number keys on the keypad.
   • Tap ☑️ and use the on-screen dialer.
   • Select a person on your saved contact list 📞.
   • Select a favorite on your speed dial list ⭐.
   • Select a number from the recent calls list ☑️.
3. Tap call 📞.
4. To end the call, tap 📞 on the screen or keypad.

Answer the Phone

When you receive a phone call, the Incoming Call screen opens. If the caller telephone number is available, it appears on the screen. Depending on your calling plan, you may also see a Caller ID information. All incoming calls are recorded in the Call log. If you miss a call, you receive a notification.

1. On the Incoming Call screen, tap and hold the white call icon.
2. Three icons appear:
   • To answer the call, drag the white call icon to 📞.
     You can also press the Phone key 📞 on the keypad to answer the call.
   • To send the caller directly to voice mail, drag the icon to 📩.
   • To send a text message back to the caller instead of answering, drag the icon to 📩.
Switch Apps During a Phone Call

You can multitask while a phone call is in progress. For example, you can use the Calendar app to check your schedule during a call.

**Note:** Depending on your WWAN connection and carrier, apps that need a data connection may be unable to access online data while the phone call is in progress. If simultaneous phone calls and data connections are not possible due to provider limitations, voice calls receive priority. Check with your provider for more information.

1. During a phone call the screen goes dark. Take the phone away from your ear to wake the screen. Tap the **Home** button.
2. Select another app (e.g., Calendar, Contacts). The phone icon appears in the status bar at the top of the screen while the call is connected.
3. To return to the call screen, swipe down from the top of the screen and select the ongoing call notification or select **Hang up** if you want to end the call.

Make an Emergency Phone Call

You can use the phone to make an emergency phone call even if the SIM card is missing from your phone. The phone shows no service but the call still goes through if you dial certain emergency numbers (e.g., 112, 911, 000, 08, 118, 119, and 999).

Configure Phone Settings

You can customize settings for the phone, including the ringtone, voicemail options, keypad tones, Internet call settings, and other options.

1. Open the phone app 📞.
2. Tap ☀️ next to the microphone icon at the top of the screen.
3. Select **Settings**. The Call settings menu appears.
4. Change phone settings as necessary.

**Note:** Available settings vary depending on your cellular carrier and phone plan.
Use this chapter to learn how to take pictures and record videos with the color camera.

About the Color Camera

The CN80 comes equipped with a 13-megapixel color camera, 4K video with image stabilization, and advanced software features for enhanced exposure control for taking pictures and videos. The camera lens and flash are located on the back of the computer.

Use the Photos app 📷 to view photos and videos stored on the CN80. By default the photos and videos captured with the Camera app are saved on the computer under Internal shared storage\DCIM\Camera.

How to Zoom

The camera zoom is controlled using a pinching motion on the touch screen. Place two fingers on the screen at the same time, and then:

- spread them apart to zoom in (enlarge and object).
- pinch them together to zoom out.

Take a Photo

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap the Snapdragon™ Camera icon 📷.

3. Using the screen as a viewfinder, move the computer until you see the image you want to capture. The camera lens is located on the back of the computer.
4. The camera automatically adjusts the focus but you can tap the screen to modify the focal point. By default, the camera senses the lighting in the environment and turns the flash on, if needed.

5. Tap 📸 to take a photo.
   • To view the picture, tap the preview near the bottom of the screen.
   • To return to the Camera app, tap the Back navigation button.

Change Camera Settings

You can change the camera settings for best results when taking pictures. The camera settings are adjustable from within the Snapdragon™ Camera app.

1. Open the Snapdragon Camera app 📸.
2. At the top of the screen, select any of the following to adjust the settings.

   - **Scene Modes**
     Use preset setting profiles for best picture quality. Options include: Automatic, High Dynamic Range (HDR), Portrait, Landscape, Sports, Candlelight, Sunset, Night, Beach, and Snow.

   - **Color Filters**
     Stylize your pictures by applying a filter. Options include: None, Sepia, Negative, Solarize, Posterize, and Aqua.

   - **HDR Mode**
     Tap to quickly toggle HDR mode On or Off. When enabled, the computer automatically captures multiple photos and combines them into one photo, creating the best quality image possible.

   - **Advanced Settings**
     Manually set advanced features. Options include: Flash, GPS location, Picture size, Picture quality, Countdown timer, Storage, Exposure, White balance, and Shutter sound.
Record a Video

This section explains how to record video with the camera in the computer.

1. Open the **Snapdragon Camera** app 📷.
2. Tap mode selection 📷 in the bottom right corner of the app.
3. Tap 🎥 to select video.
4. Tap 🎥 to begin recording video. To zoom in or out, pinch or spread your fingers apart.
5. When you are done recording, tap ✅.

Change Video Settings

You can change the video settings for best results when recording video.

1. Open the **Snapdragon Camera** app 📷.
2. Tap 🎥 to select video.
3. At the top of the screen, select any of the following to adjust the settings.

   - **Color Filter**
     Stylize your video by applying a filter. Options include: None, Sepia, Negative, Solarize, Posterize, and Aqua.

   - **Sound/Microphone**
     Tap to quickly toggle sound recording On or Off.

   - **Advanced Settings**
     Manually set advanced features. Options include: Flash, Video quality, Video duration, GPS location, Storage, and White balance.
Use the Camera as a Flashlight

To use the camera as a flashlight:

1. Open Quick Settings (see page 39).
2. Tap the **Flashlight** icon to toggle the flashlight On or Off.

**Note:** *The flashlight feature only works if the Camera app is closed.*
Use this chapter to learn about the available methods for configuring your mobile computer. You can also use this chapter to learn how to configure network communications and wireless security.

How to Configure the Computer

You can configure many parameters on the computer such as the barcode symbologies the integrated scanner decodes, or the network settings. The values you set for these parameters determine how the computer operates.

You configure the computer using the Settings app.

Start the Settings App

The Settings app is available from the all apps menu and the notification panel.

- Swipe up from the bottom of the Home screen to access all apps, and then tap Settings.

OR

- Swipe down from the top of the Home screen, and then select 📲 in the status bar.

Note: To view a simplified settings menu without descriptions, swipe right from the left edge of the Settings screen.
About the Structure of the Settings App

Use this section to learn about the structure of the Settings app so you can find parameters quickly. A search field appears at the top of the screen when you open the Settings app to help you locate settings quickly.

*Note:* The Settings app varies by computer model and OS version. Your computer may not include all the features outlined in this section.

### Network & internet

In the Settings app, select **Network & internet** to access the following settings.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Internet** | • Turn Wi-Fi radio On or Off.  
• Lists available Wi-Fi networks in range and the connection status when the radio is turned On.  
• Add a network Wi-Fi connection and view saved networks.  
• Tap **Network preferences** to turn On Wi-Fi automatically, notify for public networks, install certificates, use Wi-Fi Direct, and access Honeywell Wi-Fi Settings (see page 85). |
| **Calls & SMS** | Turn Wi-Fi calling On or Off. Wi-Fi calling allows the computer to use either a Wi-Fi or mobile network for calls, depending on signal strength. |
| **SIMs (WWAN models)** | Modify mobile network settings, including enabling data access and roaming over mobile networks, selecting access points and network operators, or selecting only 2G networks (to save battery life).  
• View Data use information.  
• Turn Mobile data On or Off.  
• Turn Roaming On or Off.  
• View app data usage.  
• Set up a data warning and limit  
• Turn 4G Calling On or Off.  
• Access advanced options, including:  
  • Preferred network settings  
  • Wi-Fi calling  
  • Carrier video calling (requires 4G Calling turned On)  
  • CDMA roaming settings and subscription settings (i.e, RUIM/SIM, NV)  
  • Automatic or manual network selection  
  • Access point name and selection  
  • User Controlled PLMN |
| **Airplane mode** | Turn Airplane mode on or off.  
*Note:* When Airplane mode is turned on, phone and Wi-Fi services are turned off. To use Wi-Fi while in Airplane mode, select **Internet** then choose a Wi-Fi network. |
| **Ethernet** | • Turn Ethernet connection On and Off.  
• View last Ethernet connection information. |
In the Settings app, select **Connected devices** to view current, connected devices and to access the following settings.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>

| Battery Optimizer       | View battery status and app usage information. Create and enable or disable a battery optimization profile that implements a group of settings to conserve power. Options include:  
  - None  
  - Energy Saver  
  - Cold Storage  
  - Add a Custom Profile Tap to create a custom battery profile that balances your application needs with energy saving settings. You can turn location services On or Off, configure sound and vibration options, modify brightness and timeout display options, turn UI transition animations On or Off, and background services On or Off. |
| BLE Beacon              | Turn the computer’s Bluetooth Low Energy (BLE) beacon On or Off. When enabled the computer emits a repetitive signal that can be used for location and proximity tracking and transferring short bursts of very small amounts of data. You can configure the beacon to turn Off when the screen turns off and set the advertising interval (i.e. Fast, Medium, Slow) of the beacon. |
| Digital Scan Button     | Enable and configure the optional digital scan button. To learn more, see Enable and Configure the Digital Scan Button, page 54. |
| Honeywell Power Setting | Enable or disable Unattended Mode. |
| HXLogger                | The HXLogger is an advanced diagnostic log service that provides a basic log service, plug-ins for modified log services, and a log manager.  
  - Tap HXLogger to turn the basic log service On or Off. When enabled, the service records app and system diagnostic troubleshooting information into four basic log files: main log file, radio log, event log, and kernel log.  
  - Tap Kernel dynamic log to toggle the feature On or Off and to set the Input file name and Input function name. This log is typically used by advanced software application developers.  
  - Tap Plugin to view and enable additional log services and custom plugins  
  - Tap Manager to change the default log path, delete logs, or upload logs for technical support troubleshooting. |
| Key WakeUp              | Set the buttons you want to use to wake the computer from sleep mode. Options include: PTT (push-to-talk), Left Scan, Middle Scan, Right Scan, Volume Up, Volume Down. By default the Left, Middle, and Right Scan buttons are enabled for wake up. |
| Keyremap                | Change (remap) a button or key function. To learn more, see Remap a Button or Key on page 37. |
| Provisioning Mode       | Enable or disable unrestricted installation of applications, certificates, configuration files, and licenses. Provisioning mode is turned Off by default. To learn more About Provisioning Mode, see page 94. |

* If your WWAN model uses a dual SIM card setup, both SIM Slot 1 and SIM Slot 2 will be listed.

About Network Communications

You can easily add the mobile computer to your wireless or wired data collection network. Connect the CN80 your computer using:

- **802.11 a/b/g/n/ac radio communications.**
- **Ethernet communications.**
- **Bluetooth communications.**
- **USB and serial communications.**
Connect to a Wi-Fi Network

The computer contains an 802.11 a/b/g/n/ac radio to transfer data using wireless communications. Before you connect to a Wi-Fi network, you need to know about your network security protocol and its required credentials.

By default, the 802.11 radio is disabled.

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap Settings > Network & internet > Internet.

3. Tap Wi-Fi to the toggle the radio On or Off.

4. On the list, tap a network name to initiate a connection.
   To add a network if it does not appear on the list:
   a. Navigate to the end of the discovered network list, tap Add network.
   b. Type the Wi-Fi network name (SSID).
   c. Choose a security protocol and add any required information.
   d. Tap Save.

5. Enter any required information if the network is secured (e.g., password, key or certificate name).

6. Tap Connect.

Once you connect to a saved Wi-Fi network:

- Tap the network name on the list to view details (e.g., status, signal strength, speed, frequency, security type).
- To edit connection details, tap the network name on the list to view details and then tap the Edit icon.
- The computer automatically connects to the same network when the network is in range and the WLAN radio is turned On.
- To view a list of only your saved networks, navigate to the bottom of the discovered network list. Tap Saved networks.
- To remove a network from your saved list, tap the network name and select Forget. You can do this for networks you no longer use.

Configure Proxy Settings for a Wi-Fi Network

If you need to connect to network resources through a proxy server, you can configure settings for the proxy server for each Wi-Fi network you add. By default, the Wi-Fi networks you add are not configured to connect through a proxy server.

Note: Proxy settings apply only to the Wi-Fi network you modify. You must change proxy settings for each network requiring a proxy server.
1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings > Network & internet > Internet**. The list of available Wi-Fi networks appears.

3. Tap the Edit icon .

4. Tap **Advanced options**.

5. Under Proxy, select **Manual**.

6. Enter the proxy settings for the network.

7. Tap **Save**.

### Disable Wi-Fi Notifications

By default, when Wi-Fi is enabled, you receive notifications in the Status bar when the computer discovers a wireless network. You can disable these notifications.

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings > Networks & internet > Internet**. Verify the WLAN radio is turned On.

3. Navigate to the bottom of the discovered network list.

4. Select **Network preferences**.

5. Tap **Notify for public networks** to toggle the setting On or Off.

### Fix Connectivity

If you have connectivity issues, you can try to resolve the issue by resetting the Internet connection. The Fix Connectivity Function restarts the Wi-Fi subsystem and radio modem. Saved Wi-Fi networks are not erased by this action.

1. Swipe up from the bottom of the home screen to access all apps.

2. Tap **Settings > Networks & internet > Internet**.

3. Tap .

   The Wi-Fi subsystem restarts and the radio modem resets.
Honeywell Wi-Fi Settings

To access Wi-Fi preference settings for advanced configuration of the wireless 802.11 radio in the mobile computer:

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap Settings > Network & internet > Internet.

3. Tap Network preferences. The Configure Wi-Fi menu appears.

4. Tap Honeywell Wi-Fi Settings.

5. Tap a setting to enable or disable the option to access additional parameters that configure the Wi-Fi radio.

Connect to an Ethernet Network

To connect the computer to an Ethernet network, you need a CN80 Ethernet Home Base or a CN80 Net Base.

1. Make sure the base is connected to your Ethernet network.

2. Place the computer in the base.

3. Swipe up from the bottom of the Home screen to access all apps.

4. Tap Settings > Network & internet > Ethernet. The Ethernet setting is turned On by default.

5. Tap Ethernet.

The Ethernet connection screen shows the current Ethernet connection. By default, the computer assumes a DHCP connection and that your network has assigned an IP address automatically. If DHCP is working, the Ethernet base should indicate that communication with the network is occurring.

6. (Optional) To assign a static IP address.
   a. Tap DHCP and then select Static from the list.
   b. Enter the required network information, and then tap Apply.

7. Tap Save.

How to Connect to Virtual Private Networks

The computer supports connecting to virtual private networks (VPNs). This section describes how to add and connect to VPNs. To configure VPN access, you must obtain details from your network administrator. You can view and change VPN settings in the Settings app.

Note: Before you can add or connect to a VPN network, you must enable a screen lock method.
Add a VPN

Before you can connect to a VPN, you must create a VPN profile.

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings** > **Network & internet** > **VPN**.

3. Tap + to add a VPN new profile.

4. Enter the required information for the VPN connection. If needed, swipe up on the screen to access all the required information fields.

5. Tap **Save**. The VPN name appears in the VPN list.

Connect to a VPN

Once a VPN profile is created, you can connect to the VPN at any time.

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings** > **Network & internet** > **VPN**.

3. Tap the name of the VPN in the list.

4. Enter any necessary credentials when prompted.

5. Tap **Connect**. A 🔄 appears in the status bar and a notification is received. To disconnect from the VPN, tap the notification.

Edit VPN Information

Editing an existing VPN profile can be done from the VPN screen.

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings** > **Network & internet** > **VPN**.

3. Tap and hold the name of the VPN in the list.

4. Tap ⌎ to the right of the VPN profile you want to edit.

5. Edit the VPN settings as necessary.

6. When you are done, tap **Save**.

About Wireless Security

The computer provides these security solutions for your wireless network:

- Wi-Fi Protected Access 2 (WPA2™)
- Wi-Fi Protected Access (WPA)
• 802.1x

Honeywell recommends WPA2 security with PSK (Personal) or 802.1x (Enterprise) key management.

Before you set security, you need to enable the radio, set the date, and set the SSID on your computer. To use 802.1x security, you need to load a root certificate on your computer. To use transport layer security (TLS) with 802.1x security, you also need to load a user certificate.

Use the Settings app to access and configure all wireless security settings.

### About Certificates

You can use digital certificates to identify the computer for network access or authentication to servers. To use a certificate to identify your device, you must install it in the trusted credential storage on the computer.

Android supports DER-encoded X.509 certificates saved in files with a .crt or .cer file extension. To install a valid certificate with a .der or other extension, you must change the extension to .crt or .cer to install it.

Android also supports X.509 certificates saved in PKCS#12 key store files with a .p12 or .pfx extension. To install a valid key store file with another extension, you must change the extension to .p12 or .pfx to install it. When you install a certificate from a PKCS#12 key store, Android also installs any accompanying private key or certificate authority certificates.

### Load a Certificate

To use a certificate, you must install it in the trusted credential storage on the computer.

**Note:** Apps such as email and browsers that support certificates allow you to install certificates directly from within the app. For more information, see the help that comes with the app.

1. Copy the certificate or key store from your PC to the mobile computer.
2. Swipe up from the bottom of the Home screen to access all apps.
3. Tap **Settings > Security > More security settings > Encryption & credentials.**
4. Tap **Install a certificate.**
5. Select either **CA certificate, VP & app user certificate**, or **Wi-Fi certificate.**
6. Tap the Menu icon menu icon , and then navigate to the location where you saved the certificate or key store.
7. Tap the certificate or key store to install it. If prompted, enter the key store password and tap **OK.**
8. Enter a name for the certificate and tap **OK**.

**Disable or Remove Certificates**

If a user or system certificate is compromised, or your organization chooses not to trust it, you can disable or remove the certificate.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings > Security > More security settings > Encryption & credentials**.
3. Select **Trusted credentials**.
   
   The trusted credentials screen has two tabs:
   
   - **System** shows Certificate Authorities (CA) certificates permanently installed on the computer. They can only be disabled.
   
   - **User** shows CA certificates you have installed yourself. You can remove these certificates.
4. Tap the name of the certificate to you want to disable or remove. The Security certificate screen appears.
5. Scroll to the bottom of the screen and tap **Disable** (for System certificates) or **Remove** (for User certificates).
6. Tap **OK**.

*Note:* You can enable a disabled System certificate but if you remove a User certificate, you must install it again to enable it.

**About Bluetooth Communications**

Your mobile computer is equipped to communicate with other devices using Bluetooth technology. The Bluetooth radio must be turned On to discover, pair and connect to other Bluetooth devices. System bar icons indicate Bluetooth radio status.

**Connect a Bluetooth Device**

To connect to a Bluetooth device, you must turn On the Bluetooth radio and then select the device from a list of discovered devices.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings > Connected devices**.
3. Tap **Pair a new device**. A list of available Bluetooth devices appears.
4. Select a device on the list to initiate a pairing request.
5. When the pairing request message appears:
   • Verify the pairing PIN is the same on both device, and then tap **PAIR**.
   OR
   • If the pairing request requires a PIN, enter the **PIN** and then tap **PAIR**.

When the device is successfully paired with the computer, the device name appears under Paired devices.

6. (Optional) Once paired to a device, you can connect manually to the device. Tap the device under Paired devices. The word “Connected” appears under the paired device name.

   The status icon changes from ✗ to ☑.

**Note:** To delete a paired device, tap the name of the paired device and then tap **FORGET**.

### Rename the Computer

You can change the name of the computer to make it easier to identify when pairing with other Bluetooth enabled devices and view statistics about received files.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Connected devices** > **Connection Preferences** > **Bluetooth**.
3. Tap **Device Name** to change the device name. Type the new name and then tap **RENAME**.

### Rename, Share, or Unpair a Paired Device

You can rename a paired device to make it easier to identify on the list or unpair the device to remove it from the paired list.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Connected devices** > **Saved devices**.
3. Tap ☀ next to the paired device.
4. Take one of the following actions:
   • To rename the device, tap the Edit icon ✎, type the new name, and then tap **RENAME**.
   • To allow **Internet access** or **Contacts and call history sharing**, tap the check box next to the setting.
   • To unpair the device, tap **FORGET**.
About the Scanner Edge App

Your mobile computer is equipped to communicate with scanners using Bluetooth technology through the Scanner Edge app. The Bluetooth radio must be turned On. System bar icons indicate Bluetooth radio status.

To turn On the Bluetooth radio:

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap Settings > Connected devices > Connection preferences > Bluetooth.
3. Tap Use Bluetooth to toggle the Bluetooth radio On or Off.

Connect a Bluetooth Scanner

To connect to a Bluetooth scanner, the Bluetooth radio must be turned on and then scan a pairing barcode with the Bluetooth scanner.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap Scanner Edge.
3. Tap the menu icon and then tap Pair BT Scanner.
4. Scan the Connect Barcode displayed on screen.
5. When the scanner is successfully paired with the computer, the scanner name appears under Connected Device.

Unpair a Paired Scanner

You can unpair the scanner to remove it from the Connected Device list.
1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Scanner Edge**.

3. Tap the menu icon and then tap **Disconnect BT Scanner**.

4. Scan the **Disconnect Barcode** displayed on screen.

---

### About Serial and USB Communications

You can use these Dolphin CX80 series accessories to transmit data to and receive data from another device through serial or USB communications:

- Vehicle dock
- Home Base
- Ethernet Home Base
- USB snap-on adapter

### USB Troubleshooting

- If you have a problem with your workstation computer recognizing the USB device, try downloading and installing the Honeywell-aidc-usb-driver. The driver is part of the Honeywell_Mobility_SDK_Android software.zip file. To learn where to get the software, see **Developer Information** on page 93.

- Check to make sure you have enabled the USB for file transfer. To learn more, see **Configure USB Connection and Transfer Files** on page 33

### How to Share Your Mobile Data Connection

You can share the mobile data connection through USB tethering or Bluetooth tethering. You can also use the computer as a Wi-Fi hotspot to share the connection with other devices.
Share the Data Connection Through USB or Bluetooth

You can share your data connection with another device through tethering. After you connect the computer to another device through a USB connection, you can share the mobile computer’s data connection through USB tethering. Or, if the device is Bluetooth-capable, you can configure the mobile computer to share the data connection with the device through Bluetooth tethering.

1. Prepare the devices.
   - For USB - Connect the mobile computer to another device through a CN80 accessory and USB communication cable. Make sure your USB connection is set to File Transfer instead of Charging.
   - For Bluetooth - Pair your CN80 with another Bluetooth enabled device. Make sure the other device is set to use a network connection by Bluetooth.

2. Swipe up from the bottom of the Home screen to access all apps.

3. Tap Settings > Network & internet > Hotspot & tethering.

4. Select the type of tether to initiate:
   - Wi-Fi hotspot
   - USB tethering
   - Bluetooth tethering
   - Ethernet tethering

The devices is now sharing the computer data connection.

Note: To stop sharing the connection, disconnect the USB cable, or tap USB tethering or Bluetooth tethering again to turn Off the feature.

About Near Field Communication (NFC)

NFC technology provides the ability for short-range, wireless data transfer between the CN80 and NFC tags or other NFC enabled devices placed in close proximity to the back of the computer. All CN80 mobile computers support the following modes of operation:

- NFC tag reader/writer mode: The computer reads and/or writes digital information from or to an NFC tag.
- Peer-to-Peer (P2P) mode: The computer uses Android Beam and/or Bluetooth technology to transfer screen content (e.g., a picture, contact information, Web page url, or file) between NFC enabled devices.
- NFC card emulation mode: The computer emulates an NFC card (smart card) that an external card reader can access. You can download and install apps for card emulation mode from the Google Play Store. Some examples include digital wallets (e-wallets) offered by your bank or credit card company and Google Pay.
The app you install determines the type of emulation mode used: Card Emulation with a Secure Element or Host-based Card Emulation. Secure element use is common for financial transactions that require a high level of security in order to provide a secure memory and execution environment for running custom smart card applets and storing your personal information (e.g., account information and credentials).

**Note:** When using a Universal Integrated Circuit (UICC) card for NFC Secure Element NFC link encryption, install the card in SIM slot 1.

### Read an NFC Tag

To read an NFC tag, place the tag near the NFC antenna, close to the battery. (Hand strap not shown.)

**Note:** NFC is On by default. To turn NFC On or Off, go to Settings > Connected devices > Connection preferences > NFC.

### Developer Information

To download the Honeywell Mobility SDK for Android and EZConfig for Mobility:

2. Create an account if you have not already created one. You must login to download the software.
3. Install the Honeywell Download Manager tool on your workstation (e.g., laptop or desktop computer) prior to trying to download any files.
4. Navigate to the software:
About Provisioning Mode

Once you complete the out-of-box initial setup process, Provisioning mode is automatically turned Off to improve device security against unwanted modifications to the system.

When Provisioning mode is turned Off (disabled):

- Configuration barcodes do not scan and process.
- `\honeywell\autoinstall` folders are inaccessible.

**Note:** To learn more about network and security for Honeywell mobile computers with Android operating systems, go to sps.honeywell.com.

Enable or Disable Provisioning Mode

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings** > **Honeywell Settings** > **Provisioning mode**.

3. Tap the button to toggle the provisioning On or Off.

About Wi-Fi Staging

Overview

You can use the Honeywell Wi-Fi Staging app to quickly set up new devices by configuring one device and using it to stage others. Wi-Fi Staging can also be used to enroll devices in a Mobile Device Management (MDM) system by connecting units to a specified network and downloading and installing the specified MDM client app.

Once you have set up a configuration in the Wi-Fi Staging app on the server device, Wi-Fi staging will use that device as a hotspot and wait for a client to connect to it. The configuration will be distributed to the client device once communication is established between the client and the server device.
Staging Devices

Wi-Fi Staging requires two steps:

1. Setting up a master device to act as a server (see next section).
2. Setting up the client device (see Set Up Client Devices on page 97).

Set Up a Device as a Server

Wi-Fi Staging provides two kinds of configurations for a master device acting as a server through a hotspot. Setup of the server device will differ based on the staging configuration you choose:

- **Basic Configs** include the most common system settings
  - System language
  - Bluetooth and NFC
  - System volume
  - Location
  - Network
  - File downloaded
  - Application installation or launch

- **Advanced Configs** allow you to stage your devices with .xml files

The hotspot on the server device will be named HONEYWELL_WIFI_STAGING.

**Note:** We recommend starting the server before setting any clients because the clients require more time and power to scan and search for the hotspot signal if the server is not created in advance.

**Note:** To control bandwidth usage, the server side of Wi-Fi Staging has a maximum limitation of 10 concurrent client connections. If more than 10 client devices attempt to connect to the server device at the same time, staging of some of those clients will be delayed until client connections become available as the staging process progresses.

Basic Configuration

Basic configuration includes the most common system settings.

1. Launch the Wi-Fi Staging app on the server device by tapping **Settings > Honeywell Settings > Wi-Fi Staging**.
2. Tap **Basic Configs** to start the configuration wizard.
3. **System language**: Tap + to add a language. At least one language must be added. Tap **NEXT**.
4. **Connection preferences**: Enable Bluetooth and/or NFC. They are disabled by default. Tap **NEXT**.

5. **Sound preferences**: Adjust the default volume for each type of audio by dragging the slider. Tap **NEXT**.

6. **Location setting**: Enable the location switch. It is disabled by default. Tap **NEXT**.

7. **Network & internet**: You have the option to set up a network connection if, for example, you want to register devices to a MDM system or the devices need to use applications that require network access.

   If you do not want to set up a network connection, tap **SKIP** and proceed to step 9.

   a. Tap **Wi-Fi Security** and select either OPEN or WPA/WPA2.
   b. Enter the Wi-Fi SSID. This field cannot be empty. Tap **OK**.
   c. Enter the Wi-Fi password. The password must be between 8 and 63 characters long. If you selected WPA/WPA2, a password is required.
   d. Tap **NEXT**.

8. **Files & Apks**: (This option will not display if you chose to skip the network settings in Step 7.) Enter the locations (URLs) of the files to be downloaded. The URL should end with the file that you want to download. Wi-Fi Staging will name the downloaded file with the file name in the URL.

   • For security, only Local Area Network URLs are supported. Wi-Fi Staging will ignore URLs from Wide Area Networks.
   • Supported network protocol is HTTP or HTTPS
   • APK files are installed silently and automatically after download
   • Optional: You can include a file’s hash in the file name/ Wi-Fi Staging supports hash algorithms SH1 and SHA256.

9. **Final Setting**: Select whether you want to reboot the device after staging is complete. You can also specify an action (intent) to launch Android devices. Then tap **NEXT**.

10. **Confirm & Staging**: Review the items you have configured. Tap **Confirmed, start staging now!** to begin. If you need to change a setting, tap the **Back** button to return to that screen.

11. Proceed to Set Up Client Devices on page 97.

    Configurations will be distributed to a client that connects to the server devices. Once the data transmission finishes successfully, the name and serial number of the configured client will display in the Wi-Fi Staging app on the server device, and the client device will skip the Android setup wizard.

    If you included a file’s hash in Step 8, Wi-Fi Staging will validate that the hash of the file downloaded to a device matches what you specified. If the downloaded file’s hash does not match, the file will be removed from the device.
Advanced Configuration

Advanced configuration allows you to stage your devices with one or more .xml files created by EZConfig or Enterprise Provisioner. For more information about generating .xml files, see the PowerTools User Guide or the Enterprise Provisioner User Guide.

**Note:** Advanced Configuration supports .xml files only. Other file types will be ignored.  
**Note:** Do not change the default names of .xml files (For example, DeviceConfig.xml is acceptable, but DeviceConfig1.xml is not)

1. Choose one device to act as the server.
2. Launch Wi-Fi Staging app on the server by tapping **Settings > Honeywell Settings > Wi-Fi Staging**.
3. Tap **Advanced Configs**
4. Tap **File directory**.
5. Specify where on the server device the .xml files to be downloaded are located.
6. Tap **NEXT**
7. Choose the files to be applied. Tap **NEXT**.
8. Review the files you have selected. If you need to change any files, tap the Back button. Otherwise, tap **Confirmed, start staging now!** to begin.

   Wi-Fi Staging will start a hotspot in the server device and wait for clients to connect.

Set Up Client Devices

The Wi-Fi Staging client runs automatically on the initial boot of a new device. However, it must be started manually on existing devices.

New Devices

This section applies to new, out-of-the-box devices only. For existing devices, see the next section.

1. Set up a server device, see page 95.
2. Place the new devices to be configured within 1 meter (93 feet) of the server device and turn them On.

   When a new device boots up and begins the setup wizard, it will attempt to
retrieve configuration from the server device, and a staging progress screen will display.

**Note:** *Client devices should be kept on the Android Welcome or setup wizard screen during staging. If you finish the setup wizard manually, the client side of the Wi-Fi Staging will stop running.*

Configurations will be distributed to any client that connects to the server device. Once the data transmission finishes successfully, the name and serial number of the configured client will display in the Wi-Fi Staging app on the server device, and the client device will skip the Android setup wizard.

### Existing Devices

To start the Wi-Fi Staging client on an existing device:

1. Set up a server device, see page 95.
2. Turn on the client device and launch the Wi-Fi Staging app by tapping **Settings > Honeywell Settings > Wi-Fi Staging.**
3. Tap **To be Staged.**
4. A message will display notifying you that the Wi-Fi settings on the client device will be reset as part of the staging process. Tap **OK** to confirm you wish to proceed.

Staging will begin and a progress screen will display.

5. Place the device within 1 meter (3 feet) of the server device and it will begin searching the server hotspot for a configuration.

The client devices will attempt to retrieve configuration from the server device and a staging process screen will display. Once the client device receives and applies the configuration successfully, the progress screen will be dismissed.

**Note:** *To stop the staging process on an existing device, tap the Back button on the client device.*

### Log Files

Wi-Fi Staging saves a key process and exemption log on the device in the following directory: `/sdcard/honeywell/Android/data/com.honeywell.wifistaging/Log/` This directory can be accessed through USB if Provisioning Mode is enabled.
About Voice Wedge

Voice Wedge is a voice-to-text conversation tool that can be triggered by a specified start word or key press event. When Voice Wedge is activated, the mobile device can capture a user’s speech and output it as text in a field in the selected app. Voice Wedge can be configured to apply globally across all apps or only for an associated application.

Note: Because Voice Wedge is powered by Google speech recognition services, it is only available on Google Mobile Services (GMS) devices.

Define Trigger Mode

You can define either a spoken word or a key press as the trigger to launch Voice Wedge.

1. Select Settings > Honeywell Settings > Voice Wedge.
2. Tap Trigger Mode.
3. Tap Start Word to define a voice command as the trigger or Key to use a key press.
4. If you selected Start Word, tap Trigger start word and then use the keypad to enter the word. The default trigger start word is “honeywell”.
5. If you selected Key, tap Trigger key and then select the key to be mapped. You can either press a button, for example, a scan button, or use a virtual key.

Note: When a button or key is selected for Voice Wedge, its original use is no longer active.

Associate Applications

By default, Voice Wedge is associated with all applications. You have the option to associate Voice Wedge with a single app.

1. Select Settings > Honeywell Settings > Voice Wedge.
2. Tap Effective Coverage.
3. Tap Single app.
4. Tap App package name.
5. Use the keyboard to enter the associated package name, for example, “com.android.chrome”, then click OK.
6. To limit Voice Wedge to a specific activity within an app, tap App activity name and use the keyboard to enter the activity name, for example, “com.google.android.apps.chrome.Main”
Define Key Commands

Voice Wedge allows you to define words so that they will be interpreted as commands rather than being displayed as text when you are speaking. When you say one of these words, Voice Wedge will send a key press.

Under **Key command**, select the check box for words that should be used as keys.

- Enter - When you say “enter” an Enter key will be sent
- Tab - When you say “tab” a Tab key will be sent
- Space - When you say “space” a space key will be sent

Select Data Type

By default, Voice Wedge enters both alphabetic and numeric characters. You can also choose to input only alpha or numeric characters.

1. Select **Settings > Honeywell Settings > Voice Wedge**.
2. Tap **Data type**.
3. Tap the data type to input.

Examples:

<table>
<thead>
<tr>
<th>Data Type</th>
<th>You say</th>
<th>Voice Wedge inputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Any</td>
<td>abc123</td>
<td>abc123</td>
</tr>
<tr>
<td>Alpha</td>
<td>abc123</td>
<td>abc</td>
</tr>
<tr>
<td>Numeric</td>
<td>abc123</td>
<td>123</td>
</tr>
</tbody>
</table>

To Use Voice Wedge in an App

Follow these steps to use Voice Wedge in an application on your device. Note that if a specific application is defined in the App Package Name setting, Voice Wedge will only work if you are using that app.

1. Select an app on your device.
2. Tap a data entry field in the app.
3. Say the defined Trigger start word or press the Trigger key
   A message indicates, “Waiting for voice input...”
4. Speak normally into the device.
   The text will populate the selected field.
About RFID Readers

Honeywell mobile computers can be paired with an RFID Reader to provide a high-performance mobile RFID solution. To read RFID tags, you can use applications that are coded to use the RFID reader or applications that receive data through the RFID wedge feature.

Use this chapter to understand how to configure settings that define how the mobile computer interacts with the Honeywell RFID Reader.

Change the RFID Settings

Changes you make to the Default profile apply to all applications with no profile assigned.

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings** > **Honeywell Settings** > **RFID**.

3. Tap an RFID reader model (IP30, IH25, IH40, IH45).

   **Note:** Refer to the accessories catalog for your mobile device to determine compatible RFID Reader models.

4. Tap **Default profile**.

5. Select from the following:
   - **RFID Reader Settings**
   - **Filter Settings**
   - **Trigger Settings** (model dependent)
   - **Notification Settings**
   - **Data Processor Settings**

6. Modify the settings to meet your application needs.
To learn more about the RFID settings, see Default RFID Settings on page 102.

**Restore Default Scan Settings**

You can easily discard all changes made to the Default profile and restore the default values.

*Note:* When you choose the Restore all defaults option from a settings screen in a profile, all the settings in that profile return to their default values.

1. Open the Default profile.
2. Tap in the upper right corner of any of the scan settings screens for the profile.
3. Tap Restore all defaults.

**Default RFID Settings**

Use the following sections to understand the settings available for RFID profiles. To learn how to create a new profile, see page 106.

**RFID Reader Settings**

You should not need to modify the RFID Reader Settings. The Override recommended values setting is disabled by default. The recommended RFID Reader Settings are designed to work in a wide range of environments.

### RFID Reader Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Default</th>

<tr>
<td>Bluetooth Power Off (sec)*</td>
<td>Sets the time period (in seconds) for which the Bluetooth radio will search for a Bluetooth connection. Range is 30 to 3600.</td>
<td>300</td>
</tr>
</tbody>
</table>

**Timeout or Tries***

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timeout Mode*</td>
<td>Enables a timeout mode. Instead of specifying the number of antenna or ID tries, specify an antenna or ID timeout value. If the reader does not find any tags after an antenna or ID try, the reader waits this long before starting the next antenna or ID try. If you enable timeout mode, you need to set the ID Timeout and Antenna Timeout values.</td>
<td>Disabled</td>
</tr>
<tr>
<td>ID Timeout (ms)*</td>
<td>Sets the maximum time period (ms) during which attempts are made to find tags before a response is returned to a READ or WRITE command. Range is 0 to 65534.</td>
<td>100</td>
</tr>
<tr>
<td>Antenna Timeout (ms)*</td>
<td>Sets the maximum time period (ms) during which each antenna is used for a READ or WRITE command. Range is 0 to 65534.</td>
<td>50</td>
</tr>
<tr>
<td>ID Tries*</td>
<td>Sets the number of times an attempt is made to find tags before a response is returned to a READ or WRITE command. Range is 1 to 254.</td>
<td>1</td>
</tr>
<tr>
<td>Antenna Tries*</td>
<td>Sets the maximum time period (ms) during which each antenna is used for a READ or WRITE command. Range is 1 to 254.</td>
<td>3</td>
</tr>
<tr>
<td>Schedule Option*</td>
<td>Controls the behavior of ANTTIMEOUT, ANTTRIES, IDTIMEOUT, and IDTRIES.</td>
<td>1</td>
</tr>
<tr>
<td>Read Tries*</td>
<td>Sets the number of times an attempt is made to read data from a tag before a response is returned to a READ command. Range is 0 to 254.</td>
<td>3</td>
</tr>
<tr>
<td>Write Tries*</td>
<td>Sets the number of times an attempt is made to write data to a tag before a response is returned to a WRITE command. Range is 1 to 254.</td>
<td>3</td>
</tr>
<tr>
<td>Initialization Tries*</td>
<td>Sets the initialization tries variable in the reader. Range is 1 to 254.</td>
<td>1</td>
</tr>
<tr>
<td>Lock Tries*</td>
<td>Sets the number of times an attempt is made to lock data on a tag before a response is returned to a Lock command. Range is 1 to 254.</td>
<td>3</td>
</tr>
</tbody>
</table>

*IP30 RFID Reader Settings only.
Filter Settings

Use the Filter Settings to modify or reject data strings.

**Filter Settings**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read filter script</td>
<td>Filter applied to raw tag results.</td>
<td>None</td>
</tr>
<tr>
<td>Debug level</td>
<td>Degree of detail in debug messages. The default level is 0, no information. Higher levels emit more information. Level 4 emits the most information.</td>
<td>0</td>
</tr>
</tbody>
</table>

*IP30 RFID Reader Settings only.

Notification Settings

Use the Notification Settings to configure how your computer responds when you scan a barcode.

**Notification Settings**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Good Read Notification</td>
<td>Enables or disables a good read notification. The notification consists of a green blink of the Good Read LED, a short beep, and an optional short vibration.</td>
<td>Enabled</td>
</tr>
<tr>
<td>Bad Read Notification</td>
<td>Enables or disables notification of a failed scan. The notification consists of a red blink of the Good Read LED, an error beep, and an optional short vibration.</td>
<td>Disabled</td>
</tr>
<tr>
<td>Vibrate On Notification</td>
<td>Enables or disables whether the computer vibrates when there is a good or bad read.</td>
<td>Disabled</td>
</tr>
</tbody>
</table>

Trigger Settings

Use the Trigger Settings to configure how the scan trigger functions. Trigger Settings is only available for some RFID reader models.

**Trigger Settings**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable reader trigger</td>
<td>Enable activating a scan by pressing the trigger on the RFID reader.</td>
<td>Enabled</td>
</tr>
</tbody>
</table>
Data Processor Settings

Use the Data Processor Settings to specify how RFID tag data is processed by the computer.

**Data Processor Settings**

</table>
Add an RFID Profile

The mobile computer has a default profile for each RFID Reader model. You can also create custom profiles as needed for your use case. Profiles are created for the RFID model.

To create an RFID profile for a custom app on the computer:

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings** > **Honeywell Settings** > **RFID** > `<RFID Reader model>`.

3. Tap + in the upper right corner of the app screen.

4. Take one of the following actions:
   - Tap the **profile name** field and then add a new name.
   - OR
   - Tap the **select an application** option, and then choose an app from the list.

The new profile appears on the RFID profile list for the selected device type. You can now select and modify the scan settings for the new profile.

Delete an RFID Profile

1. Swipe up from the bottom of the Home screen to access all apps.

2. Tap **Settings** > **Honeywell Settings** > **RFID** > `<Device type>`.

3. Tap and hold the profile you want to delete, select **Delete** and then click **OK**.
Use this chapter to understand how to upgrade software, reset, and maintain the computer.

About Software Updates

Cyber security best practices include keeping your device apps and OS up to date. To help, Honeywell offers maintenance patches, security updates and operating system upgrades through our Honeywell Edge services.

Availability and cost depend on the following:

- Date of purchase of the device or software app.
- Warranty status.
- Service agreement status (devices) or Maintenance plan status (apps).

To learn more about Honeywell Edge Services, go to https://sps.honeywell.com/us/en/services/productivity/support-services.

Software Downloads

Product support is available online through Technical Support. Software updates can be accessed through the Software Downloads portal. You will need to create a login account for portal access. Additional information such as purchased date, service agreement number, maintenance plan number, or software license number may be required for downloads.

1. Go to honeywell.com/PSSsoftware-downloads.
2. Create a login account if you have not already created one.
3. Install the Honeywell Download Manager tool. See “Note” on the portal page. This tool is required for downloads.
4. Locate the app or upgrade you want to download in the Software directory.
5. If prompted, enter additional information, and click **Submit**.
6. Select **Download**. Follow the prompts to download the file.

### About Transferring Files via USB Connection

If you plan on using a USB connection to transfer the upgrade files to the mobile computer, make sure you set the USB connection to allow file transfers. To learn more, see **Configure USB Connection and Transfer Files** on page 33.

### Install Software Updates with AutoInstall

**Important:** The Dolphin CN80 must have power for the entire length of the upgrade process or it could become unstable. Do not attempt to remove the battery during the process.

1. Swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Honeywell Settings** > **Provisioning mode**.
3. Tap the toggle button to turn Provisioning mode **On**.
4. Save the upgrade file (*.zip or *.apk) in one of the following folders on the CN80 mobile computer:
   - **Internal shared storage\honeywell\autoinstall**
     Software upgrades saved to this folder do not persist when a Full factory reset or Enterprise data reset is performed.
   - **IPSM card\honeywell\autoinstall**
     Software upgrades saved to this folder do not persist when a Full factory reset is performed. However, the upgrade does persist if an Enterprise data reset is performed.
5. Swipe up from the bottom of the Home screen to access all apps.
6. Tap **AutoInstall Settings** ☰ and **Enable AutoInstall** ✔.
7. Tap **Packages Update** from the AutoInstall Settings screen.

   The computer automatically initiates a reboot and installs the software upgrade. The system update screen appears during the upgrade process. When the update is finished, the lock screen appears.
8. Once installation is complete, turn Provisioning mode **Off**.

**Note:** Some updates do not require the computer to reboot before installation.
Optional microSD Card Method

The CN80 comes equipped with a microSD card socket. You can install an upgrade from a microSD card you insert in the computer.

**Important:** The Dolphin CN80 must have power for the entire length of the upgrade process or it could become unstable. Do not attempt to remove the battery during the process.

1. On the CN80, swipe up from the bottom of the Home screen to access all apps.
2. Tap **Settings** > **Honeywell Settings** > **Provisioning mode**.
3. Tap the toggle button to turn Provisioning mode **On**.
4. Swipe up from the bottom of the Home screen to access all apps.
5. Tap **AutoInstall Settings** 📂. Verify **Enable AutoInstall** is enabled 📕.
6. Press and hold the **Power** button, and then tap **Power off**.
7. On your workstation (e.g., laptop, desktop computer), format the microSD card and create a `\honeywell\autoinstall` folder on the root of the card.
8. Save the upgrade file in the **autoinstall** folder.
9. Install the microSD card in the CN80, and then press the **Power** button.

   The computer automatically runs the upgrade found in the autoinstall folder on the card. The system update screen appears during the upgrade process. When the upgrade is finished, the lock screen appears.
10. Once installation is complete, turn Provisioning mode **Off**.

About the Honeywell Upgrader

Use the Honeywell Upgrader app (HUplgrader) to automatically search for and install Over-the-Air (OTA) operating system updates from a remote server. The app can also be used to manually initiate a search for OS updates, update the OS using a file downloaded to the mobile device, and downgrade the operating system to a previous version. Refer to the HUplgrader User Guide available at [sps.honeywell.com](http://sps.honeywell.com) for more information.

Reboot (Restart) the Computer

You may need to reboot the computer to correct conditions where an application stops responding to the system.

1. Save your files and close any open applications.
2. Press and hold the **Power** button until the options screen appears.
3. Tap **Restart**
If the touch panel display is unresponsive:
• Press and hold the **Power** button for approximately 8 seconds until the computer reboots.

**About Enterprise Data Reset**

You can perform an Enterprise data reset if a Reboot did not improve the condition and all other troubleshooting methods have not resolved the issue. This method provides a clean configuration for troubleshooting by erasing all data from the **Internal shared storage** location on the computer. Data is not erased from the IPSM Card location.

**Caution:** An Enterprise data reset results in data loss, only perform this procedure if all other recovery methods have failed. All personal content is erased including, but not limited to emails, pictures, contacts, Google account information, system settings, and app settings.

**Note:** *This method of recovery may not be available if your system administrator has set policies to prevent the reset use.*

**Before You Begin**

• If you recently reset your Google Account password, wait 24 hours before performing a Enterprise data reset.
• Make sure you have your screen lock password, PIN or pattern if you activated one. You will need this to reset the computer.
• If you have a Google Account, back up your data and settings to your Google Account so you can restore them if needed.
• Connect the computer to an external power source or make sure you have a full battery charge.
• Make sure you have an Internet connection.

**Enterprise Data Reset the Computer**

1. Swipe up from the bottom of the Home screen to access all apps.
2. Select **Settings > System > Reset options**.
3. Tap **Enterprise data reset**.
4. Tap **Erase all data**.
5. If prompted, type your screen lock security pattern, PIN, or password.
6. Tap **Erase all data**. A message appears informing you an Enterprise data reset is being performed.
About Full Factory Reset

A Full Factory Reset should only be performed if you have exhausted all other troubleshooting options. This method reverts the computer back to the factory state by erasing all data in **Internal shared storage** and the **IPSM Card** storage locations on the computer.

**Caution:** A Full factory reset results in data loss. Perform this procedure only if all other recovery methods have failed and have no other option. All personal content is erased including, but not limited to emails, pictures, contacts, Google account information, system settings, and app settings.

**Note:** This method of recovery may not be available if your system administrator has set policies to prevent the reset use.

Before You Begin

- If you added a Google Account to the computer, make sure you have your Google username and password associated with the computer. If you do not have the username and password, you will not be able to use the computer after the reset. This is a security measure that prevents unauthorized users from using the device if they try a Full factory reset.
- If you did not add a Google Account to the computer, the extra security level is not enabled and you will not need a Google username and password.
- If you recently reset your Google Account password, wait 24 hours before performing a Full factory reset.
- Connect the computer to an external power source or make sure you have a full battery charge.
- Make sure you have an Internet connection.

Full Factory Reset the Computer

1. Swipe up from the bottom of the Home screen to access all apps.
2. Select **Settings > System > Advanced > Reset options**.
3. Tap **Erase all data (factory reset)**.
4. Tap **Erase all data**.
5. If prompted, type your screen lock security pattern, PIN, or password.
6. Tap **Erase all data**. A message appears informing you an Full factory reset is being performed.
Repairs

Repairs and/or upgrades are not to be performed on this product. These services are to be performed only by an authorized service center (see Customer Support).

Maintenance

Your device provides reliable and efficient operation with a minimum of care. Although specific maintenance is not required, the following sections describe periodic checks to ensure dependable operation.

Clean the Computer

A cleaning guide is provided on the product page at sps.honeywell.com. Please refer to this guide for a list of approved cleaners for your device.

**Note:** Reading performance may degrade if the scanner window is not clean. If the window is visibly dirty, or if the scanner is not operating well, clean the window with a soft cloth dampened with water.

**Caution:** Do not submerge the computer in cleaning solution. Do not use abrasive wipes or cloths on the windows or touch screen. Abrasive wipes may scratch the windows and touch screen. Never use solvents (acetone) on the housing or windows. Solvents may damage the computer finish, the windows, or the touch screen.

**Caution:** Ensure all components are dry prior to mating the computer with charging accessories or other peripheral devices. Mating wet components may cause damage not covered by the warranty.
Computer Agency Information

Dolphin CN80 mobile computers meet or exceed the requirements of all applicable standards organizations for safe operation. The best way to ensure safe operation is to use the mobile computer according to the agency guidelines on the product regulatory sheet, quick start guide, and in this user guide. Read all guidelines before using your computer.

Product documentation and public certificates are available for download from sps.honeywell.com.

Label Locations

Labels inside the battery compartment contain information about the computer including, compliance information, model number, serial number, IMEI number (CN80L1N models only), and MAC address. Laser safety labeling is located on the back of the computer.

Product Identification Numbers (e.g., Serial Number, MAC address, or IMEI)

Laser Safety Label Location
Physical and Environmental Specifications

2. Type CN80 in the Search box and then press Enter.
3. Select the Products tab.
4. Click the red arrow under the Dolphin CN80 Handheld Computer description.
5. Select one of the following:
   - Specifications
     View System Architecture, Wireless Connectivity, Mechanical, and Environmental specifications.
   - Resources
Barcode Symbologies Supported

The computer supports the following barcode symbologies:

<table>
<thead>
<tr>
<th>1D Symbologies</th>
<th>2D Symbologies</th>
<th>Postal Codes</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Default</td>
<td>Default</td>

</tbody>
</table>

**Note:** To learn about changing the symbology settings, see [Change the Scanner Settings](#) on page 46.

N6603ER Imager Engine Reading Distances

The depth of field measurements were taken using these parameters:

- Distances are measured from the front of the engine.
- +23 °C (+73 °F), 0 lux
- Photographic quality codes

**Note:** Time to Read and Depth of Field are impacted if the barcode symbol is at the edge of the image.
White Illumination Monochrome Sensor Only

<table>
<thead>
<tr>

N6603ER Imager Engine Field of View/Resolution

<table>
<thead>
<tr>
<th>Focus</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Horizontal Field Angle (degrees)</td>
<td>17.6 ±3.5°</td>
</tr>
<tr>
<td>Vertical Field Angle (degrees)</td>
<td>13.5 ±3.5°</td>
</tr>
</tbody>
</table>

**Note:** DPI can be calculated based on the following formula:
- Horizontal DPI = 832 pixels/width of horizontal field of view (inches)
- Vertical DPI = 640 pixels/width of vertical field of view (inches)

EX20 Near/Far Image Engine Reading Distances

The depth of field measurements were taken using these parameters:
- Distances are measured from the front of the engine.
- +23 °C (+73 °F), 0 lux
- Photographic quality codes

**Note:** Time to Read and Depth of Field are impacted if the barcode symbol is at the edge of the image.
