

CPU card for Systemevo DECT central unit, with link option

Part-No.: 790D155

CPU card for installation in the central unit. With a processor unit, serial interface and ETH connection and with LINK communication interface (high-speed), in order to network several central units. The CPU card is integrated into the Systemevo DECT central unit and processes the communication between the DECT end devices registered in the system and the connected telecom system via analogue extension users or the VoIP/SIP interface. This unit also takes on the control of the voice and data signals between the individual base stations and repeaters in the entire transmission/reception network. The central unit is connected to a workstation via the serial interface (RS232). Use of the serial interface for the configuration of the overall Systemevo DECT system and for transmission of ASCII text messages (SMS paging) of a Systemevo Call Ackermann connected to the workstation. Option for remote diagnosis for the system analysis and services via remote access.

Features:

- Serial interface RS232
- LINK-Communications interface
- ETH-LAN interface
- status LEDs

Frequency range	1900 MHz ... 1880 MHz
Ambient temperature	0 °C ... 40 °C
Dimensions	W: 45 mm H: 140 mm D: 200 mm
