

PABX-interface card (16 a/b)

Part-No.: 790D170

Plug-in card for the central unit for administering up to 16 DECT end devices via analogue (a/b) extension users of the telecom system. The PABX interface card is integrated into the Systevo DECT central unit and processes the communication and control of the voice and data signals between the connected telecom system and the wireless DECT telephones. Support of the “query” performance feature via the “flash” function of the telecom system, as well as the CLIP function for telephone number transmission via the standard “Clip FSK Bell”. To achieve the optimum compatibility with various telecom systems, various parameter adaptations are available.
