GENERAL INFORMATION

Why is the SMART Position Sensor smart? SMART means that this is a sensor that can essentially think for itself. The SMART Position Sensor has the ability to self-calibrate because it uses a patented combination of an ASIC (Application-Specific Integrated Circuit) and an array of MR (magnetoresistive) sensors to accurately and reliably determine the position of a magnet attached to a moving object (e.g., elevator, valve, machinery, etc.) so that the object’s position can be determined.

The MR array measures the output of the MR sensors mounted along the magnet’s direction of travel. The output and the MR sensor sequence determine the nearest pair of MR sensors to the center of the magnet location. The output of these two MR sensors is then used to determine the position of the magnet between them. With this sensor, Honeywell has utilized MR technology through the ASIC at a level never before accomplished.

MOUNTING AND WIRING INFORMATION (see Fig. 2)

1. Locate sensor and magnet in desired position. Ensure:
   - Air gap between sensor and magnet does not exceed that given in Table 1.
   - Alignment of magnet along length of sensor does not exceed 2,0 ± 2,5 mm [0.078 ± 0.098 in] from the center line of each component.

2. Mount sensor:
   - Drill two holes, one for each mounting ear.
   - Secure sensor using two ¼-20 or M6 screws through each mounting ear.
   - Torque screws to 6 N m to 10 N m [53.1 in lb to 88.5 in lb].

3. Mount magnet (Does not apply to 35 mm version):
   - Drill two holes:
     - One for the single mounting ear.
     - One at 10,25 ± 0.10 mm [0.403 ± 0.004] dia., and at least 3 mm [0.118 in] deep, for the mounting dog (helps stabilize magnet).
   - While ensuring the mounting dog is seated in its hole, secure magnet using one ¼-20 or M6 screw through the mounting ear.
   - Torque screws to 6 N m to 10 N m [53.1 in lb to 88.5 in lb].

4. Wire sensor according to the lead colors given in Table 1. (Does not apply to 35 mm version.)

</table>

\(^1\) Percent linearity is the quotient of the measured output deviation from the best fit line at the measured temperature to the full scale output span.

**NOTICE**

- Ferrous metal within a 100 mm [3.9 in] radius of the magnet actuator may affect sensor performance.
- Always use fresh, non-magnetic stainless steel washers when mounting the sensor.

WARRANTY/REMEDY

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship during the applicable warranty period. Honeywell’s standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgment or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items that Honeywell, in its sole discretion, finds defective. The foregoing is buyer’s sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.

While Honeywell may provide application assistance personally, through our literature and the Honeywell web site, it is buyer’s sole responsibility to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this writing. However, Honeywell assumes no responsibility for its use.
