

20PC SMT Pressure Sensors Deadspace Volume Figures (in³)

BACKGROUND

Honeywell Sensing and Control's 20PC surface mount transducer (SMT) products may be used in a wide variety of applications and markets, two of which include medical and food/beverage

PURPOSE

This application note describes the total deadspace figures for all of the 20PC pressure

products including the surface mount version (SMT). The deadspace is the volume inside a pressure sensor where there is no flow. Your application may also have to include tubing or fixturing, etc. Knowing deadspace volume is especially important in certain medical applications where fluids need to be cleaned out. The larger the deadspace, usually the harder it is to clean.
